CROWN BOOKS

USER GUIDE · EDITION 1.0

SIMPLE BOOKS FOR GROWING BUSINESSES

Crown Books

The user guide

Run the business.
We'll keep the books.

For billing and accounts staff

A step-by-step guide to parties, items, bills, invoices, receipts, payments, stock, reports and backups.

October 2026

Built around the Crown Traders example company

READ THIS FIRST

Your books, one step at a time

Crown Books keeps the accounts of one business on this computer. It answers three questions: who owes us, who do we owe, and do the books balance. This guide shows the actual screens and the exact buttons to press.

01

Who owes us?

Sales invoices, receipts, receivables and ageing.

02

Who do we owe?

Purchase bills, payments, payables and due dates.

03

Do the books balance?

Trial balance, profit and loss, and the balance sheet.

Before you start

- [ ] Business name, address, state and GSTIN.
- [ ] Owner name, email and a password of at least 8 characters.
- [ ] The date your books should begin.
- [ ] Customer and supplier list, with phone and GSTIN where known.
- [ ] Item list with HSN or SAC, unit, GST rate, sale and purchase price.
- [ ] Opening stock, opening party balances and cash or bank balances.
- [ ] Copies of unpaid customer invoices and supplier bills.

How to read a step

Button and field names appear in **bold** exactly as they appear on screen. Numbers and voucher numbers appear in `monospace`.

> **TIP**
>
> Do one chapter at a time. The first five steps in chapter 1 are enough to post your first invoice. Everything else can wait until you need it.

> **IMPORTANT**
>
> Posted vouchers are never edited. If a bill is wrong, cancel it with a reason and enter a fresh one. The cancelled number is kept forever.

What the guide covers

CHAPTER	YOU WILL LEARN
1	First run, sign in, the screen, and the anatomy of a voucher.
2	Company settings, chart of accounts and opening balances.
3	Customers and suppliers, credit terms and balances.
4	Goods, services, GST rates, opening stock and the stock summary.
5	Purchase bills, supplier payments, payables and the purchase register.

CONTENTS AT A GLANCE

Chapters 6 to 10

CHAPTER	YOU WILL LEARN
6	Sales invoices, printing, receipts, receivables and ageing.
7	Journals, contra transfers, cancellation and corrections.
8	Day book, trial balance, profit and loss, and balance sheet.
9	Backups, restore, and the daily safety routine.
10	Shortcuts, voucher series, common messages, glossary and checklists.

Your first path through the book

01
Set up
Company, books begin, parties and items.

→

02
Buy
Post a purchase bill and pay the supplier.

→

03
Sell
Post an invoice, print it, record the receipt.

→

04
Check
Trial balance, profit and loss, backup.

Symbols used in this guide

LABEL	MEANING
TIP	A faster or safer way to do the same job.
IMPORTANT	A mistake that changes the books or the GST return.
Bold	The exact name of a button, field or page.
`INV/0001`	A voucher number or a value you will see on screen.
1 **2** **3** on a screenshot	A callout. Find the same number in the list under the picture.

> **TIP**
> If you only have ten minutes, read 1.2, 1.5, 3.2, 4.2, 5.2 and 6.2, then post one purchase and one sale. That is enough to understand the whole application.

How the pieces fit

MASTERS
Who and what
Company, parties, items, accounts.

→

VOUCHERS
What happened
Bills, invoices, receipts, payments, journals.

→

REPORTS
What it means
Trial balance, profit and loss, balance sheet.

CONTENTS

What is where

10 chapters · 31 figures

CHAPTER 01

Start here

1.1 Open the app · 1.2 First-run setup · 1.3 Sign in · 1.4 The screen · 1.5 The anatomy of a voucher · 1.6 Your first five steps

CHAPTER 02

Company and opening balances

2.1 Company settings · 2.2 What “books begin” means · 2.3 Chart of accounts · 2.4 Opening balances · 2.5 Reserved masters

CHAPTER 03

Customers and suppliers

3.1 One record per business · 3.2 Create a party · 3.3 Edit and deactivate · 3.4 Read the party list · 3.5 Credit days and credit limit

CHAPTER 04

Items and stock

4.1 Goods and services · 4.2 Create an item · 4.3 Opening stock · 4.4 Item list · 4.5 Stock summary · 4.6 How stock moves

CHAPTER 05

Buying: bills and payments

5.1 The buying flow · 5.2 New purchase bill · 5.3 What posting does · 5.4 Print a purchase bill · 5.5 Pay a supplier · 5.6 Payables · 5.7 Purchase register · 5.8 Buying checklist

CHAPTER 06

Selling: invoices and receipts

6.1 The selling flow · 6.2 New sales invoice · 6.3 GST and place of supply · 6.4 Print or save the invoice · 6.5 Receipt from a customer · 6.6 Receivables and ageing · 6.7 Sales register · 6.8 Selling checklist

CHAPTER 07

Adjustments and corrections

7.1 Posted means posted · 7.2 Cancel a voucher · 7.3 Journal · 7.4 Contra · 7.5 The journals list · 7.6 When to ask your accountant

CHAPTER 08

Reports

8.1 How reports work · 8.2 Day book · 8.3 Trial balance · 8.4 Profit and loss · 8.5 Balance sheet · 8.6 Report map

CHAPTER 09

Backup and safety

9.1 Create a backup · 9.2 Restore a backup · 9.3 When to back up · 9.4 Safety rules · 9.5 This computer only

CHAPTER 10

Reference

10.1 Keyboard shortcuts · 10.2 Voucher series and status · 10.3 Messages and fixes · 10.4 Glossary · 10.5 Daily, weekly and monthly · 10.6 Not active in this edition

Page numbers are in the footer. Figures are numbered by chapter, for example Figure 6.2. The guide uses the Crown Traders example company, so the names and amounts in the screenshots will differ from your own books.

Start by situation

A

New business

Chapter 1, then 2.1, 3, 4 and 6. Skip opening balances unless you already have stock or dues.

B

Moving from Tally or QuickBooks

Read 2.2 and 2.4 first. Bring the closing balances and open bills, then continue at chapter 5.

C

Daily billing clerk

Chapter 6 for sales, 5 for purchases, 8 for reports, and 9 for the end-of-day backup.

01 Start here

Open the app, create the company, sign in, and learn the one pattern every voucher follows. By the end of this chapter you will know where everything lives.

IN THIS CHAPTER

- Opening the app
- First-run setup
- Signing in again
- The navigation rail and top bar
- The anatomy of a voucher
- Your first five steps

1.1 Open the app

Crown Books is installed on this computer. Open it from the Start menu or the desktop shortcut. The app checks that this computer is the one the books were installed for. If you see **“This computer is not authorised”**, stop and contact your administrator. The application is not designed to be copied to another machine.

There is no internet connection, no cloud account and no sign-in to a website. Everything is stored in a local database file on this computer.

1.2 First-run setup

The first time the app opens, it asks for the company and the owner account. This happens once. You can change the company details later in **Admin → Company**.

SETUP ASKS FOR	WHY IT MATTERS
Business name	Printed on invoices; shown in the sidebar.
Owner name, phone, email	The first user. The email is the sign-in name.
Password	At least 8 characters; stored hashed on this machine.
State and GSTIN	Decide CGST + SGST or IGST and print the registration on documents.
Books begin	The first day this ledger records transactions; not the financial year.

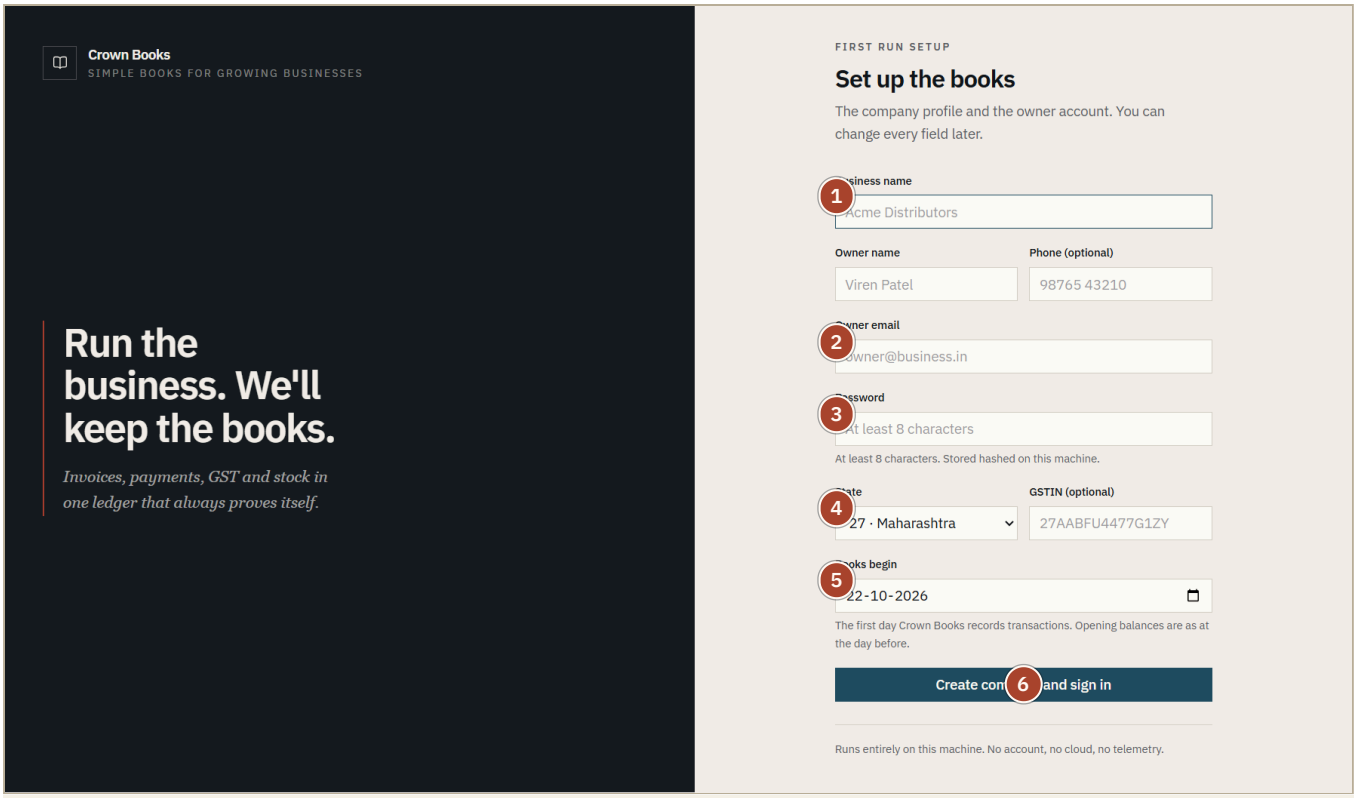

Figure 1.1 The first-run screen. The company and owner are created together.

1. Business name, owner and phone
2. Owner email is the sign-in name
3. Password, at least 8 characters
4. State and GSTIN decide the tax treatment
5. First day of your books
6. Creates the company and signs you in

1. **Business name.** Enter the name you want on invoices, for example Crown Traders.
2. **Owner name** and **Phone (optional)**. The owner is the first user and can do everything.
3. **Owner email.** This becomes your sign-in name. Use an address you check.
4. **Password.** At least 8 characters. It is stored hashed on this machine. There is no “forgot password” email in this edition; keep it somewhere safe.
5. **State** and **GSTIN (optional)**. The state decides whether a sale is taxed as CGST + SGST or IGST. Enter the GSTIN exactly as registered, without spaces.
6. **Books begin.** The first day Crown Books records transactions. See 2.2 before you choose a mid-year date.
7. Click **Create company and sign in**.

> **BOOKS BEGIN IS NOT THE FINANCIAL YEAR**
>
> The financial year is the reporting period, usually 1 April to 31 March. Books begin is the day this app starts keeping the ledger. If you are starting fresh on 1 April, both dates can be 1 April. If you are migrating in October, books begin is the day after your last entry in the old system, while the financial year is still the current April-to-March year.

1.3 Sign in again

After setup, every launch shows the sign-in screen. Enter the owner email and password and click **Sign in**. Staff accounts, when they are added in a later edition, will use the same screen.

To leave the app, open the account menu at the top right and choose **Sign out**. Closing the window is also safe. Nothing is lost when you sign out because every posted voucher is already in the database.

1.4 The screen

Every page has the same frame: a dark navigation rail on the left, a thin top bar, and the page itself. The rail is grouped by the work you are doing, not by database tables.

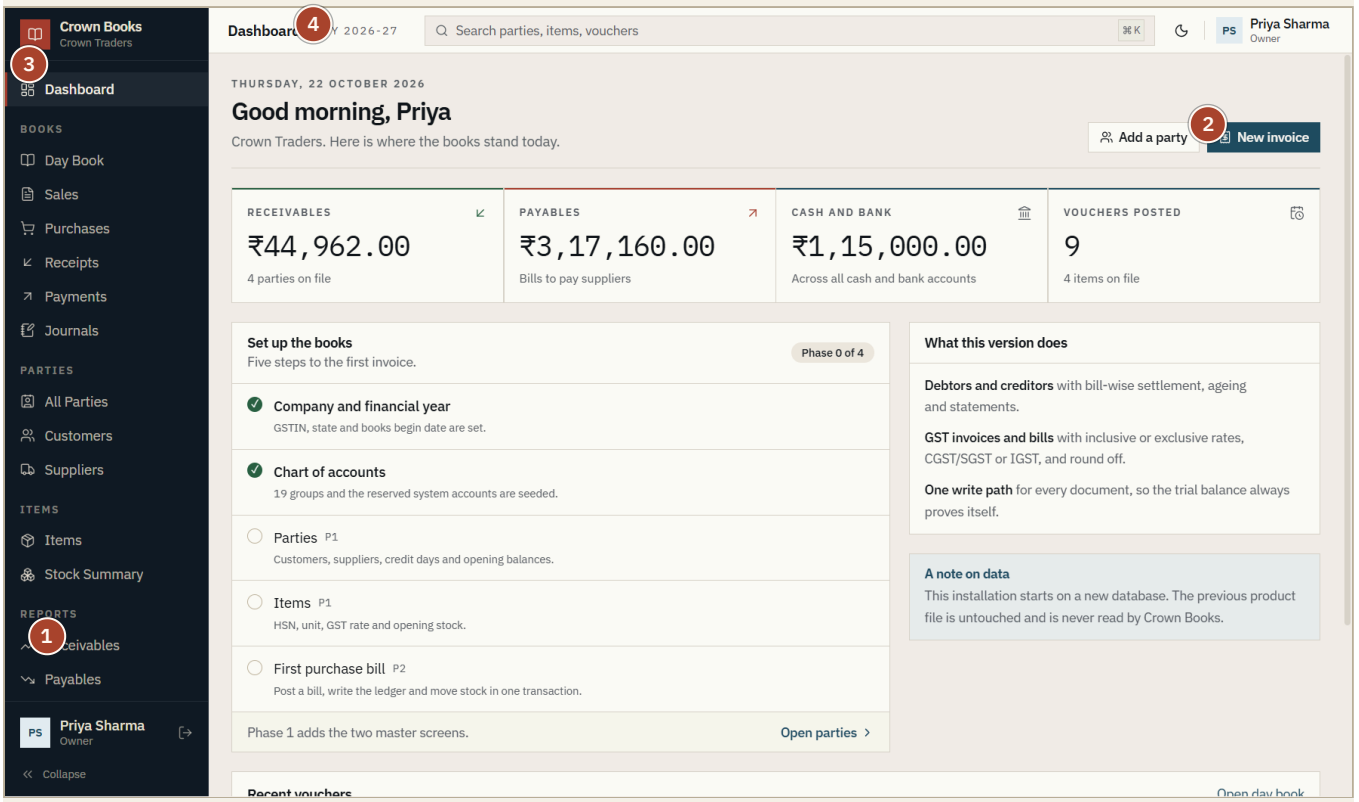

Figure 1.2 The dashboard for Crown Traders, with the navigation rail and the four headline numbers.

1. Four numbers for today
2. Quick actions
3. The modules live in this rail
4. Current financial year and account

RAIL GROUP	WHAT IT IS FOR
Dashboard	The four numbers: receivables, payables, cash and bank, vouchers posted.
Books	Day Book, Sales, Purchases, Receipts, Payments and Journals. These are the documents.
Parties	All Parties, Customers and Suppliers. One record per business.
Items	Items and Stock Summary. Goods and services, and what is on hand.
Reports	Receivables, Payables, Ageing, Trial Balance, Profit and Loss, Balance Sheet.

RAIL GROUP	WHAT IT IS FOR
Masters	Chart of Accounts. Tax Rates and Units are reserved for a later edition.
Admin	Company, Users and Roles (reserved), and Backup.

The top bar shows the page name, the current financial year, and your account. The theme button switches between the paper and dark palettes. The search box in the top bar is reserved for a later edition; use the search field on each page instead.

1.5 The anatomy of a voucher

A voucher is any document that changes the books: an invoice, a bill, a receipt, a payment, a journal or a contra. Every entry screen uses the same five-part pattern. Once you know one, you know all of them.

01
Header
Party, date, due date, reference and place of supply.

→

02
Lines
Item, description, quantity, rate, discount and GST.

→

03
Totals
Taxable value, tax, round off and the final total.

→

04
Post
The server checks, numbers and writes the voucher.

> **THE ONE RULE THAT PREVENTS MOST MISTAKES**
>
> **Nothing is saved until you press Post.** Closing the screen or pressing Cancel discards the entry. The voucher number is assigned only when the post succeeds, and a posted voucher is never edited.

1.6 Your first five steps

If you only want to see a complete cycle, do these five things in order. The rest of the guide explains each one in detail.

1. **Create the company** in first-run setup. Use 1 April as books begin if you are starting a fresh year.
2. **Add a customer and a supplier** under Parties. One record each is enough to begin.
3. **Add one item** under Items. Enter its HSN, GST rate and sale price.
4. **Post a purchase bill** under Purchases. This brings stock in and creates the supplier payable.
5. **Post a sales invoice** under Sales. Then open the invoice and click **Print** to see the document.

02 Company and opening balances

The company profile is printed on every document. The chart of accounts is the list of ledgers behind the reports. Opening balances are the one-time bridge from your old books.

IN THIS CHAPTER

- Company identity and financial year
- What “books begin” means
- Chart of accounts and reserved ledgers
- Opening balances, posted once
- Reserved masters

2.1 Company settings

Open **Admin** → **Company**. The page has four sections: identity, financial year, stock and rounding, and invoice terms.

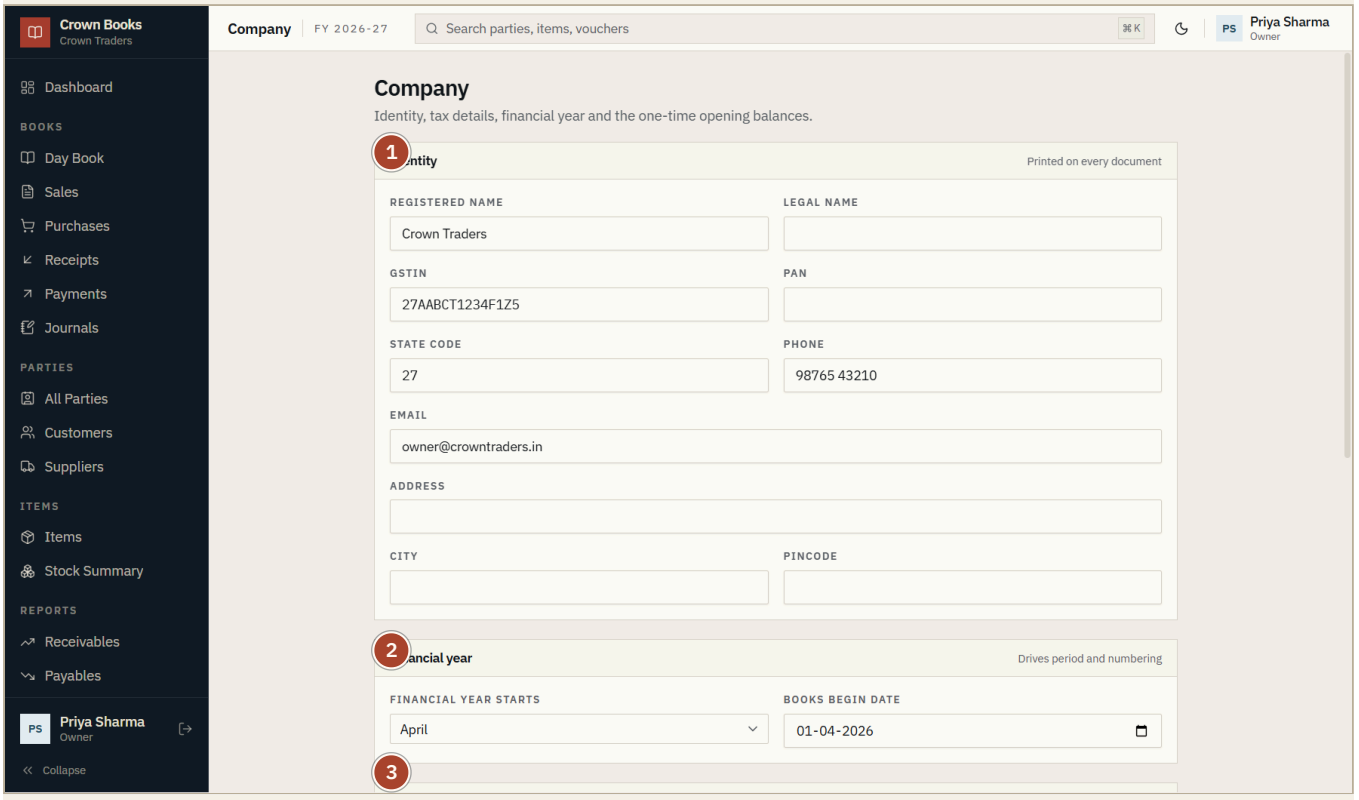

Figure 2.1 Company settings. The identity is used on printed documents; the financial year drives numbering and reports.

1. Identity printed on invoices
2. Financial year and books begin date
3. Stock costing and invoice rounding

FIELD	WHAT TO ENTER
Registered name	The name printed on invoices, usually the legal or trading name.
GSTIN, PAN, state code	Registration details. The state code must be two digits, for example 27 for Maharashtra.
Address, city, pincode	The address printed above the invoice lines.
Financial year starts	The month your reporting year starts. April is the default for India.
Books begin date	The first day this app records transactions. See 2.2.
Costing method	Keep **Weighted average**. This edition values stock at weighted average cost.
Round off	How the invoice total is rounded. **Invoice total** is the usual choice.
Default terms	Saved with the company. It is not printed on the current invoice layout in this edition.

> **LEAVE THIS UNTICKED**
>
> **Allow selling below stock on hand** is recorded as a setting but the current build does not enforce a stock guard. Keep it unticked and check the stock summary before a large sale.

2.2 What “books begin” means

Books begin is the first day Crown Books is responsible for the ledger. Before that date, the history lives in your old system, your accountant’s file, or nowhere. At that date you bring in one opening position: what you own, what you owe, and what customers owe you.

It is not the financial year. A business can have a financial year from 1 April to 31 March and still begin its Crown Books ledger on 1 October after migrating from Tally. The financial year of an October invoice is still the current April-to-March year.

SITUATION	WHAT TO ENTER
Starting a new business	The day you want the books to start, often 1 April or the day of the first sale.
Fresh financial year	1 April of that year. Opening balances are the previous 31 March closing balances.
Migrating mid-year	The day after the last entry in the old system. Opening balances are as at the close of the day before.
Only using Crown Books for sales	Still use the real start date. Do not enter a later date just to avoid old data.

> **OPENING BALANCES ARE THE DAY BEFORE**
>
> If the old system is closed on 30 September and books begin is 1 October, the opening balances are the position at the close of 30 September. That is the same instant as the start of 1 October. Post the opening voucher with the opening date, then start entering October transactions.

2.3 Chart of accounts

Every voucher writes to ledgers. The chart of accounts is the list of those ledgers, grouped into assets, liabilities, equity, income and expenses. Crown Books seeds a working set so you do not have to create one from scratch.

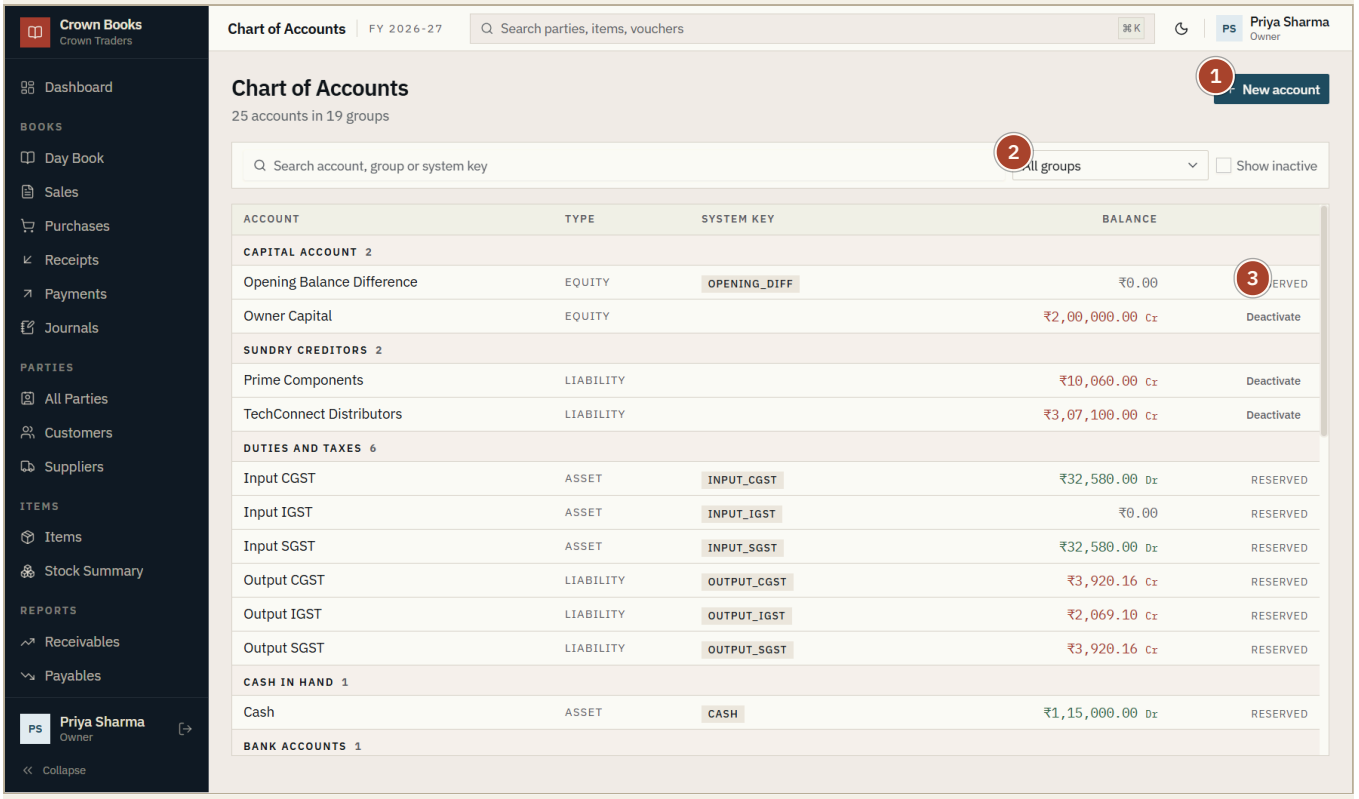

Figure 2.2 The chart of accounts. Rows marked Reserved are used by the posting engine and cannot be deactivated.

1. Add a ledger when the seeded list is not enough
2. Group decides the nature: asset, liability, income, expense
3. Reserved accounts keep the posting engine working

The reserved ledgers are not decoration. Sales, purchases, GST, inventory, cost of goods sold, round off and the opening difference all have a fixed job. You can add your own ledgers for rent, salaries, travel or any other expense without touching the reserved ones.

1. Click **New account**.
2. Enter a **Name**, for example Office Expenses.
3. Choose a **Group**. The group decides the nature; for example Indirect Expenses is an expense group.
4. Check the **Type**. It follows the group but can be adjusted.
5. Leave the opening balance at zero unless you are setting up the opening position.
6. Click **Add account**.

To set an opening balance on an existing account, use the **Opening balance (INR)** and **Side** fields when the account is created. **Dr** means a debit balance, **Cr** a credit balance. If you are not sure which side, ask your accountant before posting.

2.4 Opening balances

Opening balances come from three places: the party record, the account record and the item record. They are collected into one opening voucher so that the trial balance stays balanced.

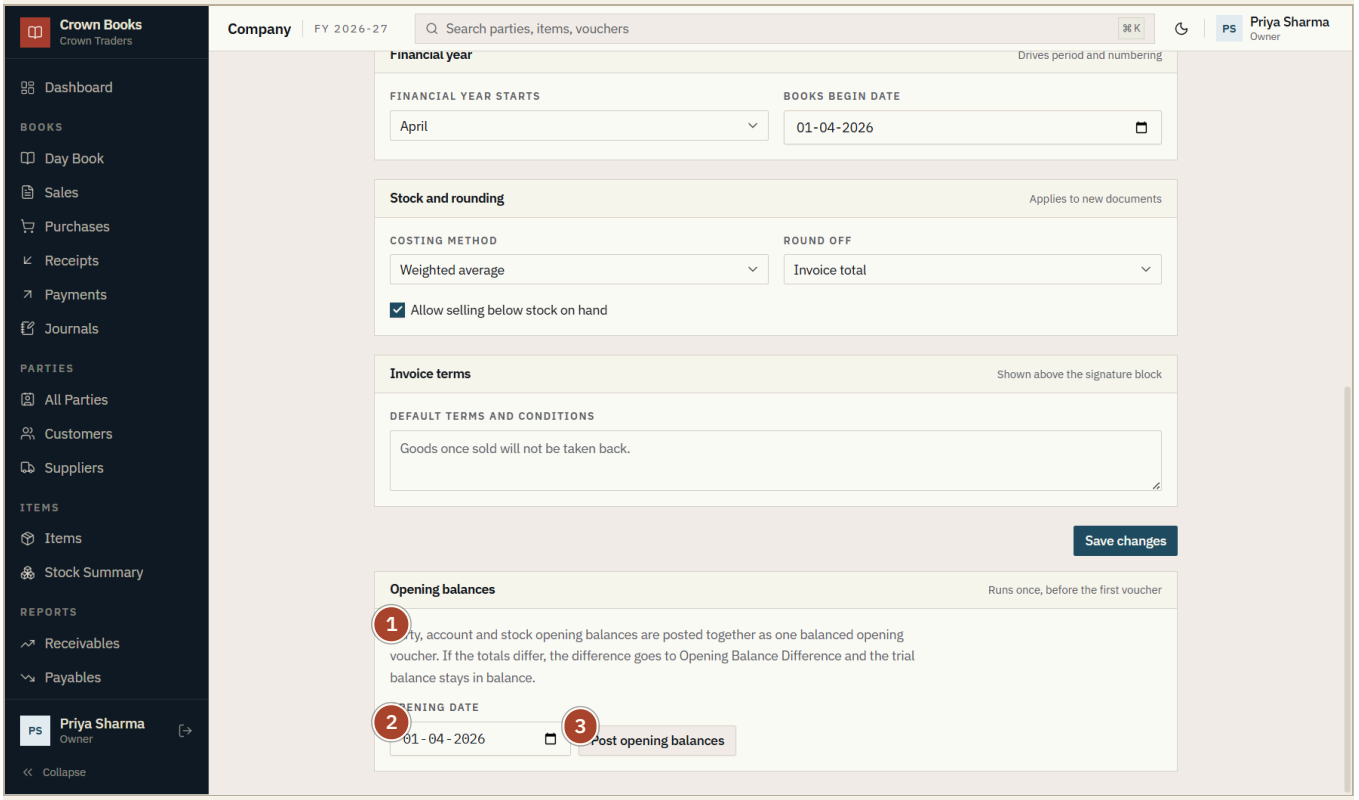

Figure 2.3 The opening balances section in Company settings. It runs once, before the first real voucher.

1. One opening voucher for parties, accounts and stock
2. Usually the first day of the books
3. Runs once; corrections go through a journal

1. Add the customer and supplier opening balances in the party records. Positive means the party owes you (Dr); negative means you owe the party (Cr).
2. Add the opening balance and side on any bank, cash, loan or capital account.
3. Add opening quantity and opening rate on each goods item. Services do not hold stock.
4. Open **Admin → Company**, scroll to **Opening balances**, and choose the **Opening date**.
5. Click **Post opening balances**. One `OPN/0001` voucher is created.
6. Open the trial balance and check that debits equal credits. If there is a difference, it sits in **Opening Balance Difference**, which should be investigated, not ignored.

> **DO NOT COUNT THE SAME STOCK TWICE**
>
> If opening stock already includes goods, do not enter a purchase bill for those same goods. If you want the purchase history, leave opening stock at zero and enter the historical purchase bills instead. The same rule applies to opening party balances and old invoices.

AFTER THE OPENING VOUCHER

The opening fields are locked. Corrections go through a journal, not by editing the opening voucher. This is deliberate: the opening position must stay stable once you have reconciled it.

2.5 Reserved masters

Masters → Tax Rates and **Masters → Units** appear in the rail but are reserved screens in this edition. GST rates are chosen on each item and can be overridden on an invoice line. Units are seeded (Nos, Pcs, Kg, Ltr, Mtr and others) and chosen on the item. **Admin → Users and Roles** is also reserved.

2.6 Opening balance checklist

- [ ] The old system is closed and reconciled on the day before books begin.
- [ ] Every customer and supplier opening balance is entered, with the correct Dr or Cr side.
- [ ] Cash, bank, loans and capital are entered on the account records.
- [ ] Opening stock quantity and rate are entered for goods, or left zero if you are bringing purchase history.
- [ ] The opening date matches the day before the first new transaction.
- [ ] The opening voucher is posted once.
- [ ] The trial balance says “Debits equal credits” and Opening Balance Difference is zero or explained.

MIGRATION EXAMPLE

The old system has entries up to 30 September. The owner wants Crown Books to start on 1 October. Set **Books begin** to 1 October, enter balances as at 30 September, and post the opening voucher dated 1 October. The first new sale is dated 1 October or later. The financial year is still the current April-to-March year.

03 Customers and suppliers

One record per business. The same business can be a customer and a supplier. The balance column tells you whether they owe you or you owe them.

IN THIS CHAPTER

- One record per business
- Create a party
- Edit and deactivate
- Read the party list
- Credit days and credit limit

3.1 One record per business

A party is a customer, a supplier, or both. Use one record for a business even if you buy from and sell to them. The role is chosen when the party is created and is not changed later, because the role decides which ledger accounts the party uses.

The balance is shown as **Dr** or **Cr**. For a customer, Dr means they owe you. For a supplier, Cr means you owe them. A negative customer balance or a positive supplier balance is possible after an advance or an overpayment; it is not automatically an error.

3.2 Create a party

Open **Parties** → **All Parties** and click **New party**.

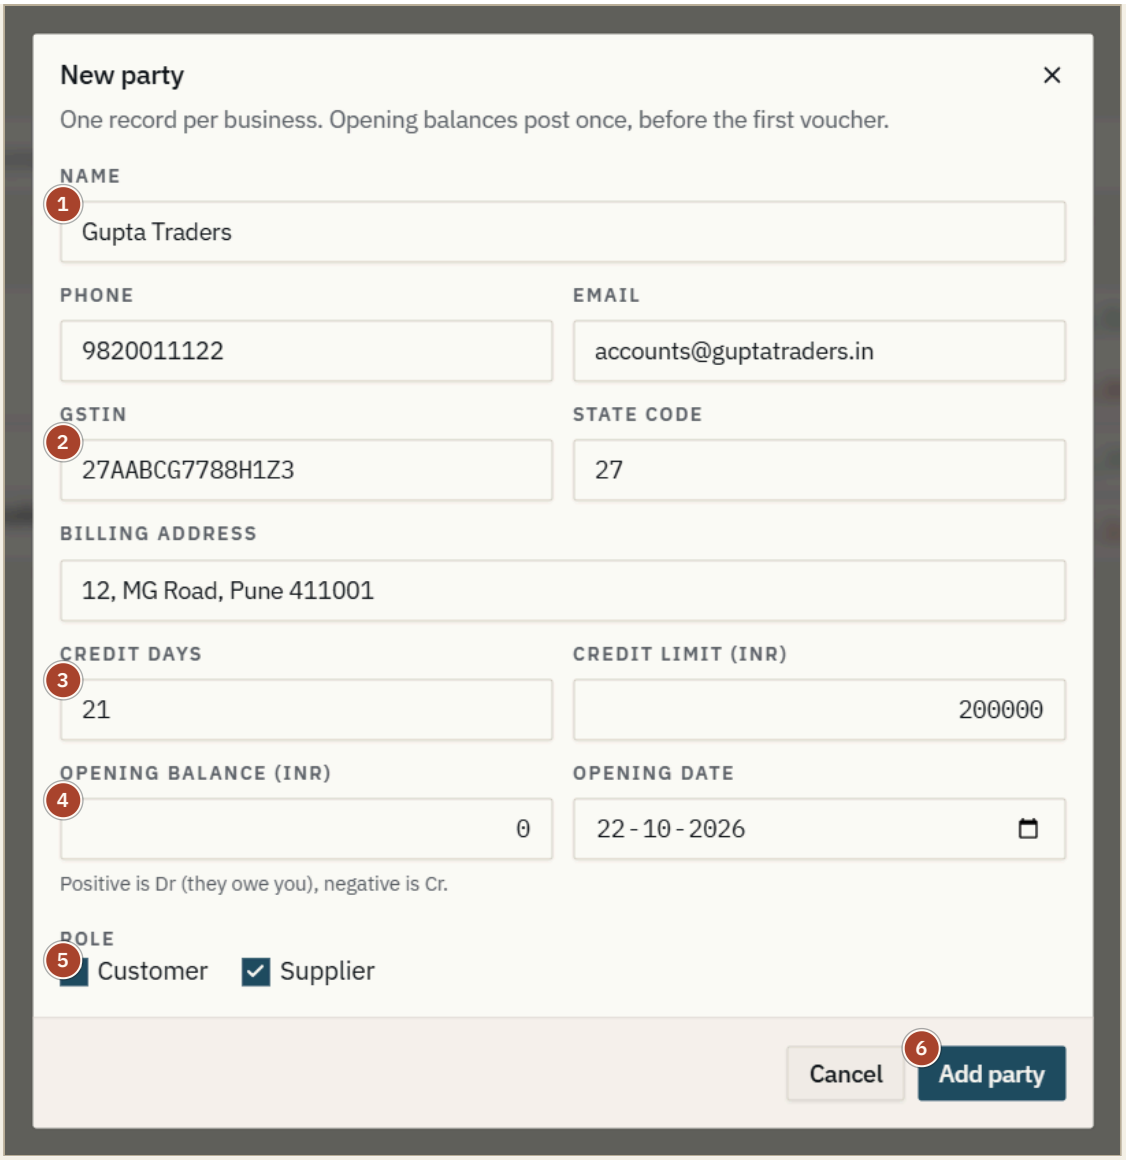

Figure 3.1 The New party form, filled for a business that is both a customer and a supplier.

1. Legal or trading name
2. GSTIN and state code control the tax type
3. Credit days set the default due date
4. Opening balance is posted later, once
5. Customer, supplier, or both
6. Save the party

1. **Name.** The trading name you will recognise in lists, for example Gupta Traders.
2. **Phone** and **Email.** Optional, but useful when chasing a bill.
3. **GSTIN.** Enter the 15-character registration number. Leave blank for an unregistered party.
4. **State code.** Two digits. This is used to decide CGST + SGST or IGST on a sale.
5. **Billing address.** Printed on documents when available.
6. **Credit days.** The default due date on a new invoice. 30 means the invoice is due 30 days after the invoice date.
7. **Credit limit (INR).** A reference limit. It does not block a sale in this edition.

8. **Opening balance (INR).** Positive if the party owes you, negative if you owe the party. Leave zero for a new party.
9. **Role.** Tick **Customer**, **Supplier**, or both.
10. Click **Add party**.

3.3 Edit and deactivate

Use **Edit** on a row to correct a phone number, address, credit days or credit limit. The role and the opening balance are fixed after the party is created. If a party is no longer used, click **Deactivate**. The history stays in the books; the party stops appearing in new-entry lists.

> **TIP**
>
> Deactivate a party instead of renaming it to “OLD”. Reports and old vouchers keep the original name and history, and the list stays readable.

3.4 Read the party list

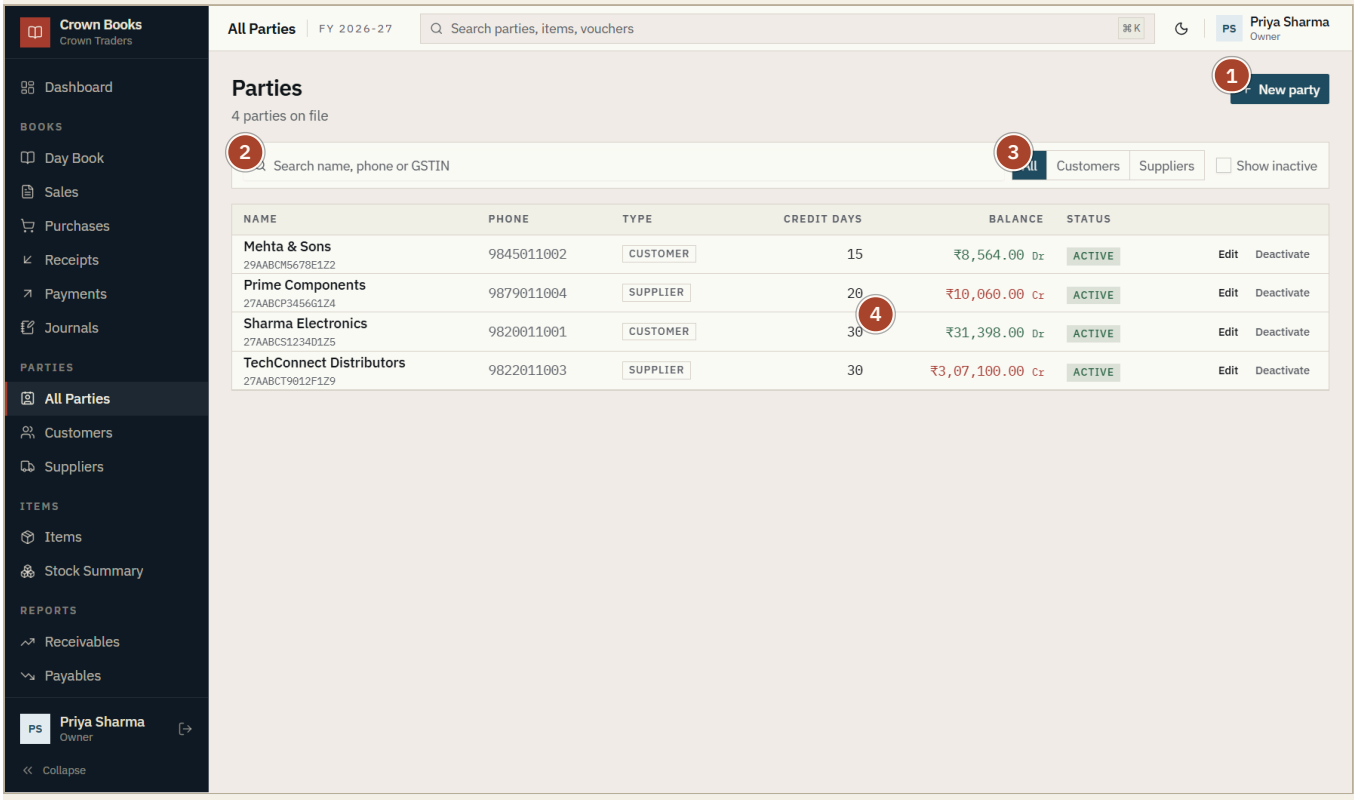

Figure 3.2 The parties list. The balance column is the net position across all posted vouchers.

1. Create a customer or supplier
2. Search by name, phone or GSTIN
3. Filter by role
4. Current balance: positive means they owe you

The search box matches name, phone and GSTIN. The role buttons filter to All, Customers or Suppliers. **Show inactive** reveals deactivated records. The **Credit days** column is the default payment term, not the

age of the current balance.

3.5 Credit days and credit limit

Credit days are copied to the due date when you choose the party on an invoice. You can change the due date for an individual invoice. Ageing reports use the due date by default, so a wrong credit term makes a bill look overdue earlier or later than it really is.

Credit limit is a reference figure for your team. In this edition it does not stop an invoice from being posted. If a customer is near the limit, the person entering the sale must check.

3.6 Party checklist

- [ ] The legal or trading name is the one you will recognise later.
- [ ] GSTIN is 15 characters and the state code is two digits.
- [ ] Customer, supplier or both is chosen correctly; the role cannot change later.
- [ ] Credit days match the agreed terms.
- [ ] Opening balance is zero for a new party, or the correct Dr / Cr amount for a migration.
- [ ] Phone and email are present if the team chases bills.
- [ ] The party appears in the right filter: Customers, Suppliers or All Parties.

Which role should I choose?

ROLE	USE IT WHEN
Customer	You sell to them. They appear in Sales and Receivables.
Supplier	You buy from them. They appear in Purchases and Payables.
Both	You buy and sell to the same business. One record keeps the net balance in one place.

04 Items and stock

An item is anything you buy or sell: a physical product with stock, or a service with no stock. The item carries the HSN or SAC, the unit, the GST rate and the default prices.

IN THIS CHAPTER

- Goods and services
- Create an item
- Opening stock
- The item list
- The stock summary
- How stock moves

4.1 Goods and services

A **goods item** carries stock. Buying it increases quantity, selling it decreases quantity, and the stock summary shows what is left. A **service item** has no stock; it is used for maintenance, consulting or any other work billed by quantity, hours or a flat rate.

4.2 Create an item

Open **Items** → **Items** and click **New item**.

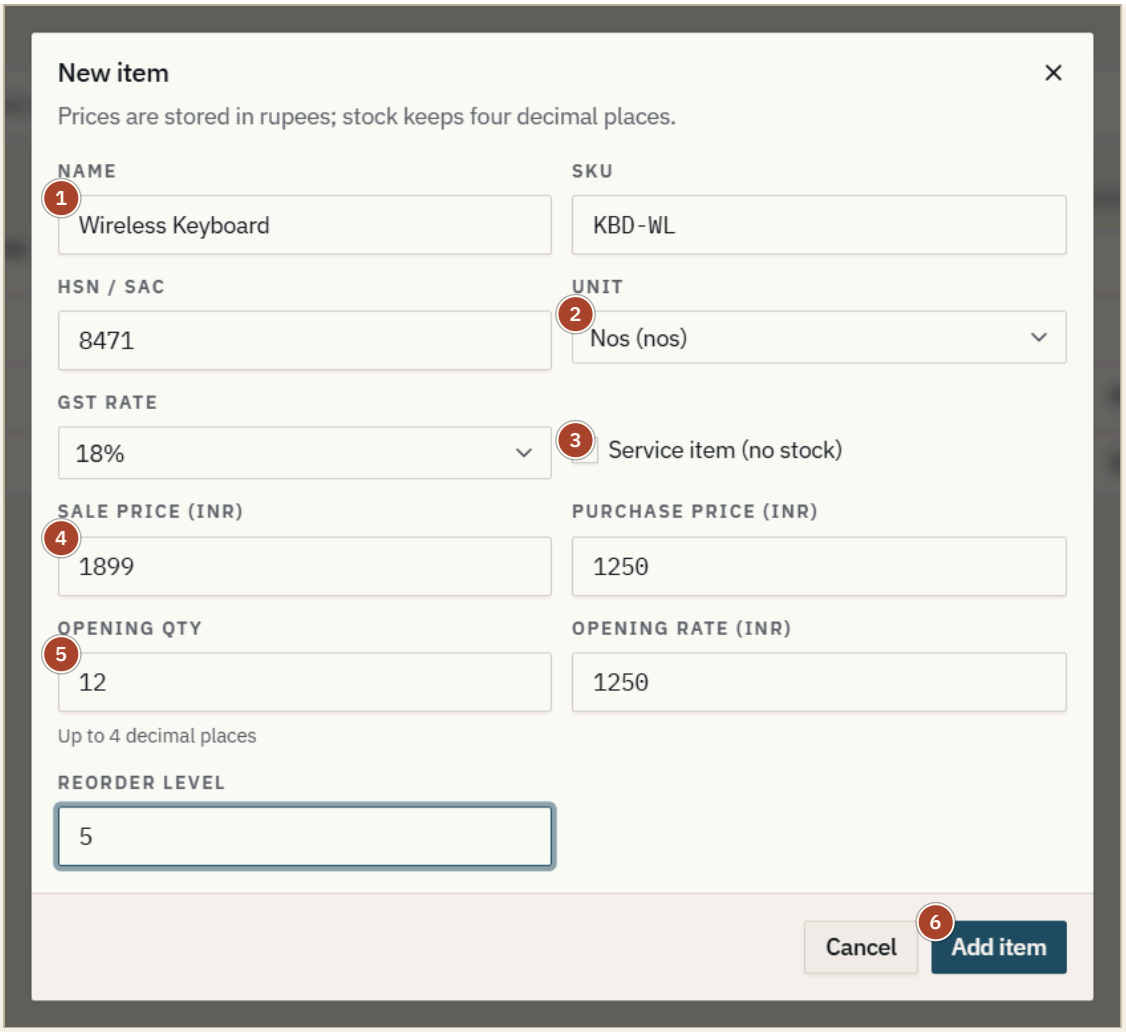

Figure 4.1 The New item form, filled for a goods item with opening stock.

1. Name, SKU and HSN or SAC
2. Unit and GST rate
3. Tick for services, which never hold stock
4. Default sale and purchase prices
5. Opening stock and cost
6. Save the item

1. **Name.** The name that appears on the invoice, for example Wireless Keyboard.
2. **SKU.** Your internal code. Optional but useful for searching.
3. **HSN / SAC.** The classification code for GST. Goods use HSN, services use SAC.
4. **Unit.** Nos, Pcs, Kg, Ltr, Mtr and others are seeded.
5. **GST rate.** 0, 5, 12, 18 or 28 percent. The rate is copied to a new invoice line but can be changed there.
6. **Service item (no stock).** Tick for services.
7. **Sale price** and **Purchase price (INR)**. These are defaults, not locked prices.
8. **Opening qty** and **Opening rate (INR)**. Only for goods you already hold. These are fixed after the item is created.
9. **Reorder level.** A reference level for purchasing. It does not create an alert in this edition.
10. Click **Add item**.

4.3 Opening stock

Opening quantity and opening rate are included in the one-time opening voucher. They are not a purchase bill. If you enter opening stock and then also enter a purchase bill for the same goods, stock and cost will be counted twice.

> **CHOOSE ONE METHOD**
>
> **Opening stock only:** enter what you hold now and start buying from today. **Full purchase history:** leave opening stock at zero and enter the old purchase bills. Do not mix the two for the same goods.

4.4 The item list

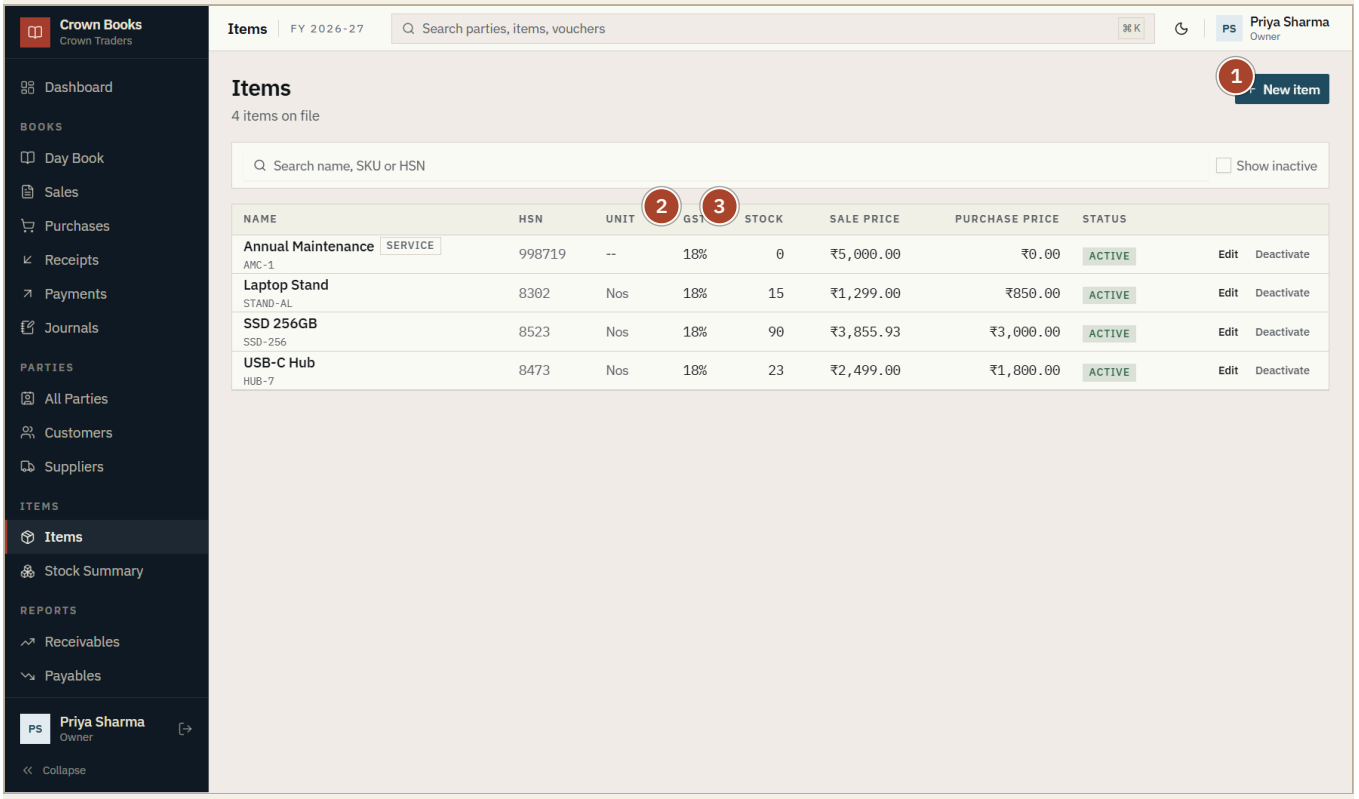

Figure 4.2 The item list. Stock and prices are shown per item; service items are tagged.

1. Create a goods or service item
2. HSN or SAC and GST rate
3. Quantity on hand, from posted movements

The list shows HSN or SAC, unit, GST rate, stock on hand, sale price and purchase price. Use the search box for name, SKU or HSN. Edit changes the descriptive fields and default prices; opening quantity and rate stay fixed. Deactivate hides an item from new entries without deleting history.

4.5 Stock summary

Open **Items → Stock Summary**. This is a computed report, not a data-entry screen. It reads every posted purchase, sale and return.

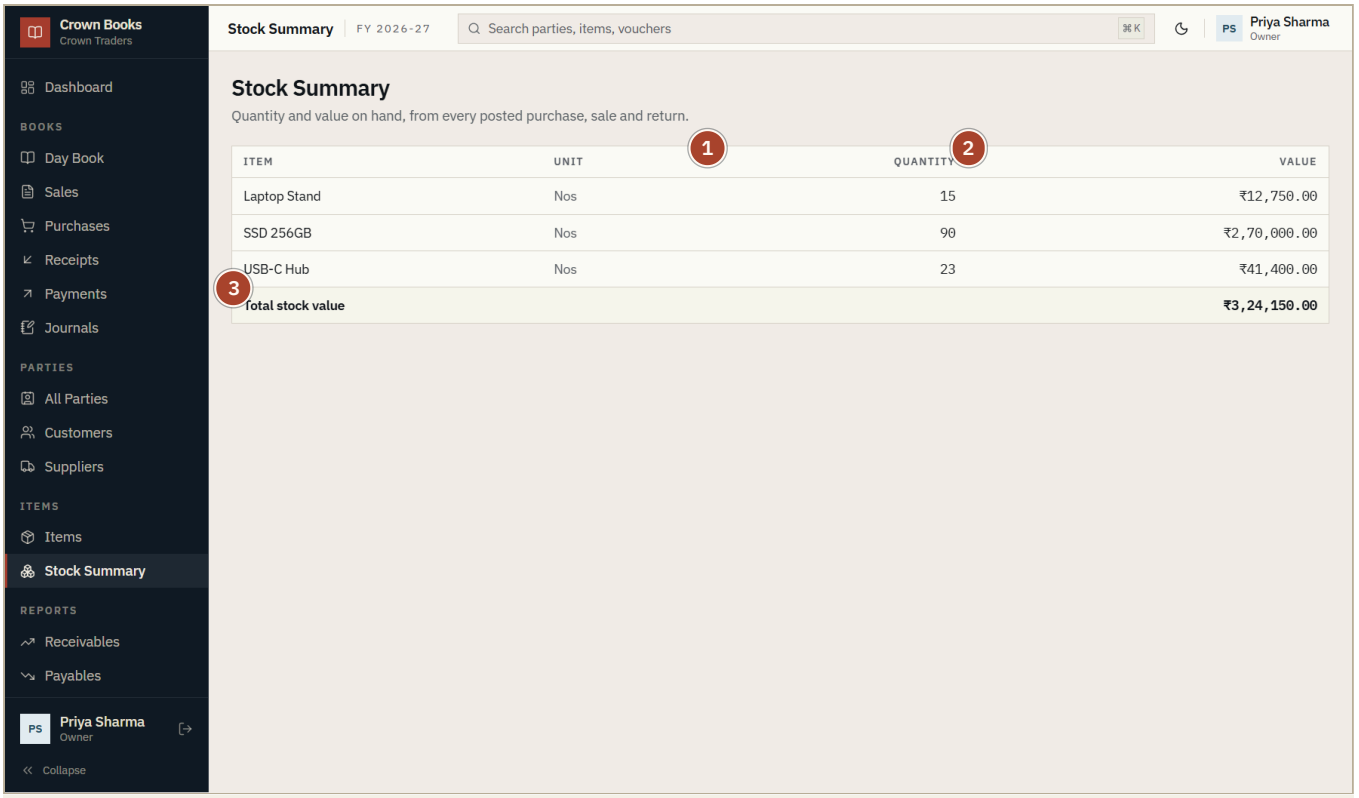

Figure 4.3 Stock on hand by item, with quantity and value at weighted average cost.

1. Quantity after every posted purchase and sale
2. Value at weighted average cost
3. Total stock value

Quantity is what is left. Value is quantity multiplied by the weighted average cost of the item. The total at the bottom is the inventory value that appears on the balance sheet. Services are not shown because they hold no stock.

4.6 How stock moves

ACTION	EFFECT ON STOCK	EFFECT ON THE BOOKS
Post a purchase bill	Quantity increases.	Creditor increases, inventory increases, input GST is recorded.
Post a sales invoice	Quantity decreases.	Customer owes you, sales and output GST increase, cost of goods sold is recorded.
Cancel a purchase or sale	The original movement is reversed.	The ledger effect is reversed; the voucher stays with status Cancelled.
Enter opening stock	Quantity starts at the opening figure.	Inventory and the opening difference are recorded once.

> **WHY THE STOCK VALUE CAN CHANGE WITHOUT A NEW PURCHASE**
>
> The costing method is weighted average. When a new purchase arrives at a different rate, the average cost of the remaining stock changes, so the value of the same quantity can move.

05 Buying: bills and payments

A purchase bill brings stock in and creates what you owe the supplier. A payment reduces that balance. The payables report tells you what is still open and when it is due.

IN THIS CHAPTER

- The buying flow
- New purchase bill
- What posting does
- Print a purchase bill
- Pay a supplier
- Payables and the purchase register

5.1 The buying flow

01
Purchase bill
Stock comes in. The supplier becomes a creditor.

→

02
Payment
Money goes out. Allocate it to the bill it settles.

→

03
Payables
What is still owed, split into not due and overdue.

5.2 New purchase bill

Open **Books** → **Purchases** and click **New bill**. The screen is a bill, not a payment. Enter what the supplier billed you.

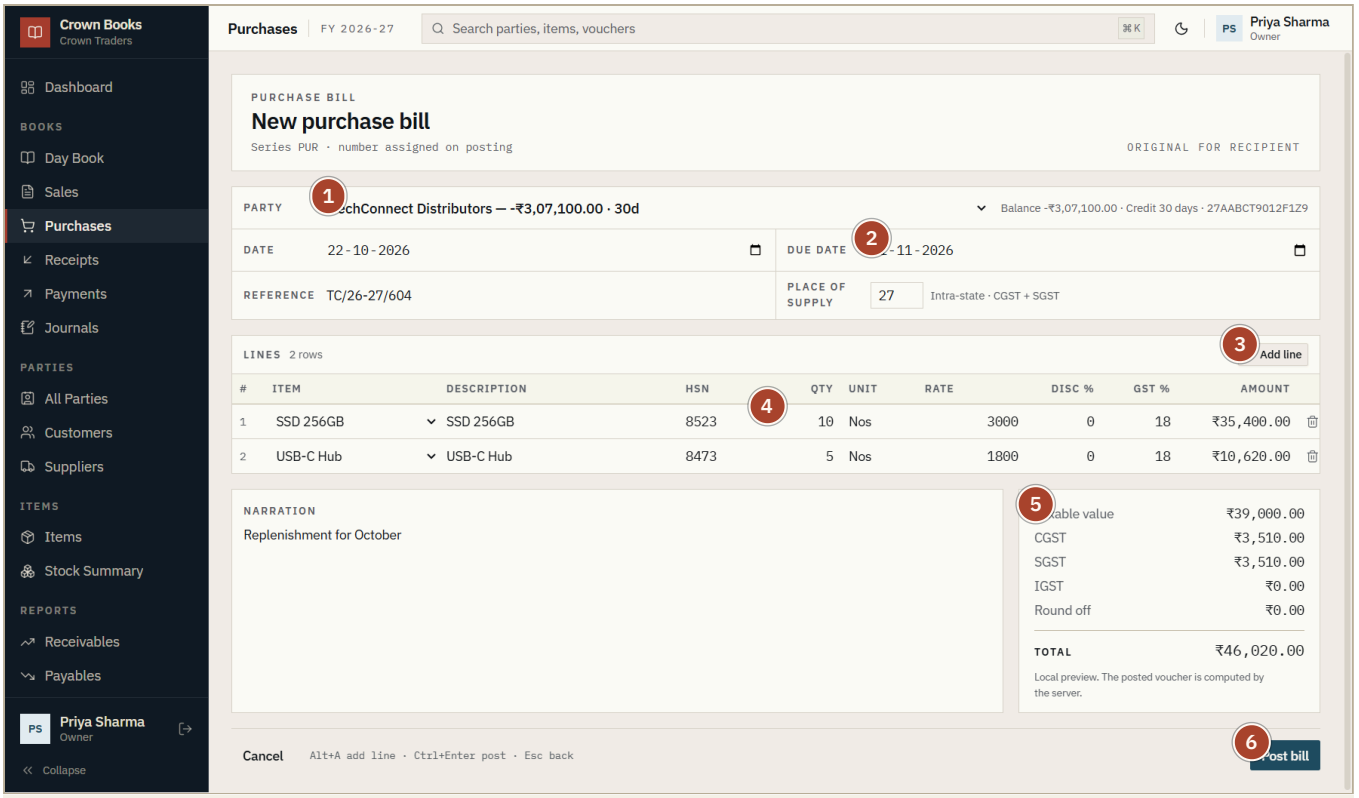

Figure 5.1 A new purchase bill with two item lines. The total is calculated before posting.

1. Choose the supplier
2. Bill date and due date
3. Add each item on its own line
4. Quantity, rate, discount and GST
5. Tax and total are calculated
6. Posts the bill and moves stock

1. **Party.** Choose the supplier. The list shows the current balance and credit days.
2. **Date.** The bill date. This decides the financial year and the register period.
3. **Due date.** Filled from the supplier's credit days. Change it if the bill says otherwise.
4. **Reference.** The supplier's bill number, for example TC/26-27/604.
5. **Place of supply.** The supplier's state code. Same state gives CGST + SGST; a different state gives IGST.
6. **Add line** for each item. Choose the item or type a free-text description.
7. Enter **Qty**, **Rate**, **Disc %** and **GST %**. HSN and unit fill from the item but can be changed.
8. Check **Taxable value**, the tax split, **Round off** and **Total**.
9. Add a **Narration** that will make sense in six months.
10. Click **Post bill**. The number, for example `PUR/0001`, is assigned at that moment.

LINE FIELD	WHAT IT MEANS
Item	A saved item, or Free text for a one-off purchase. A saved goods item moves stock.
Description	The words printed on the bill. Defaults to the item name.
HSN	The GST classification. Defaults from the item.
Qty and Unit	How much was received. Up to four decimal places.
Rate	The purchase rate before GST.
Disc %	Line discount. Leave 0 if there is none.
GST %	The tax rate for this line. It can differ from the item default.

5.3 What posting does

- The supplier’s payable increases by the bill total.
- Inventory increases by the taxable value of goods lines; services post to the expense or purchase ledger without stock.
- Input CGST, SGST or IGST is recorded according to the place of supply.
- The voucher gets a permanent number and appears in the purchase register and payables.

> **THE BILL IS NOT THE PAYMENT**
>
> Posting a purchase bill does not move money. It records the obligation. Use a payment voucher when the money actually leaves.

5.4 Print a purchase bill

Open **Purchases**, click the bill number, and use **Print**. The print dialog also lets you choose **Save as PDF** if you need a file for email or records. The printed view carries the company name, supplier, bill number, lines, tax and total.

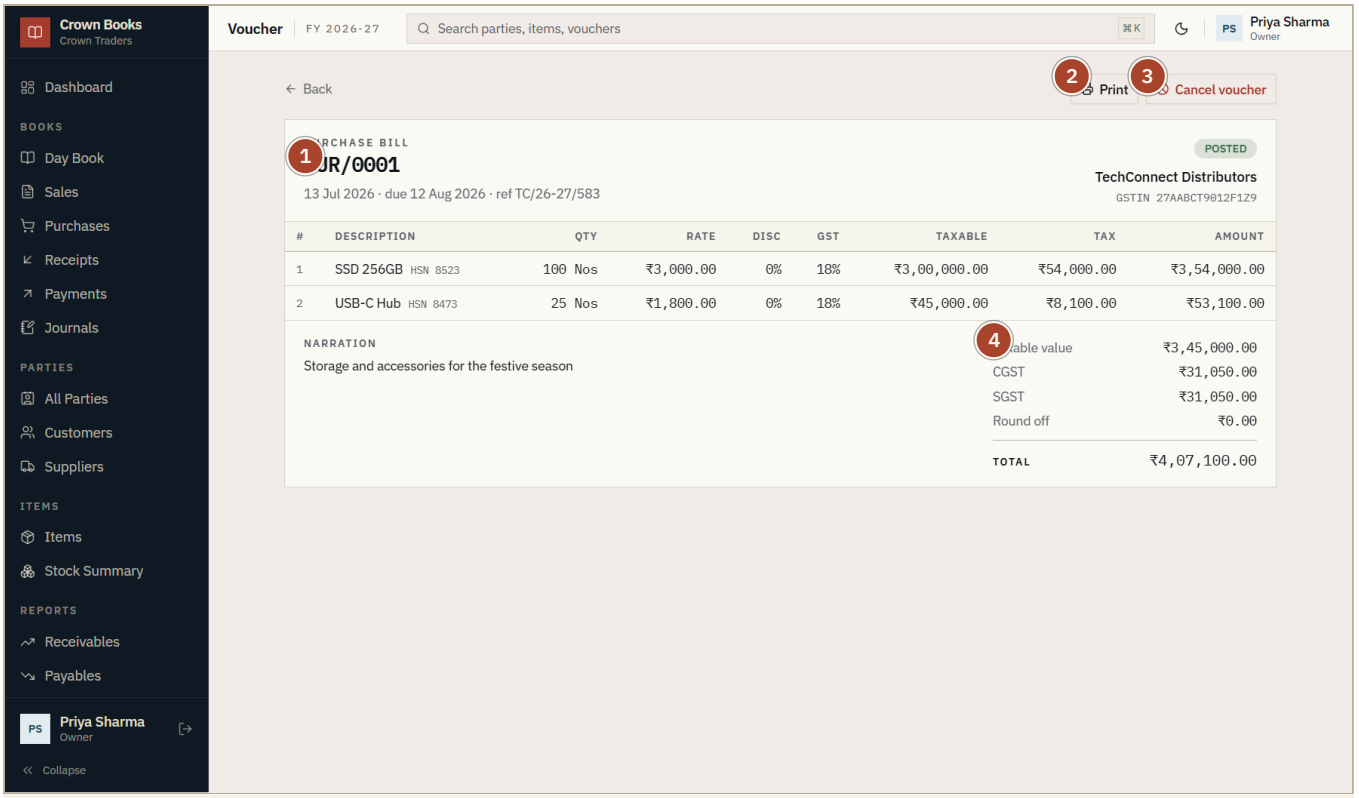

Figure 5.2 A posted purchase bill. Print is available here; Cancel voucher reverses the effect.

1. Posted document with a permanent number
2. Print the bill or save it as PDF
3. Cancel reverses the effect; the number is kept
4. Tax and total

5.5 Pay a supplier

Open **Books → Payments** and click **New payment**. A payment can settle one bill, several bills, or stay on account as an advance.

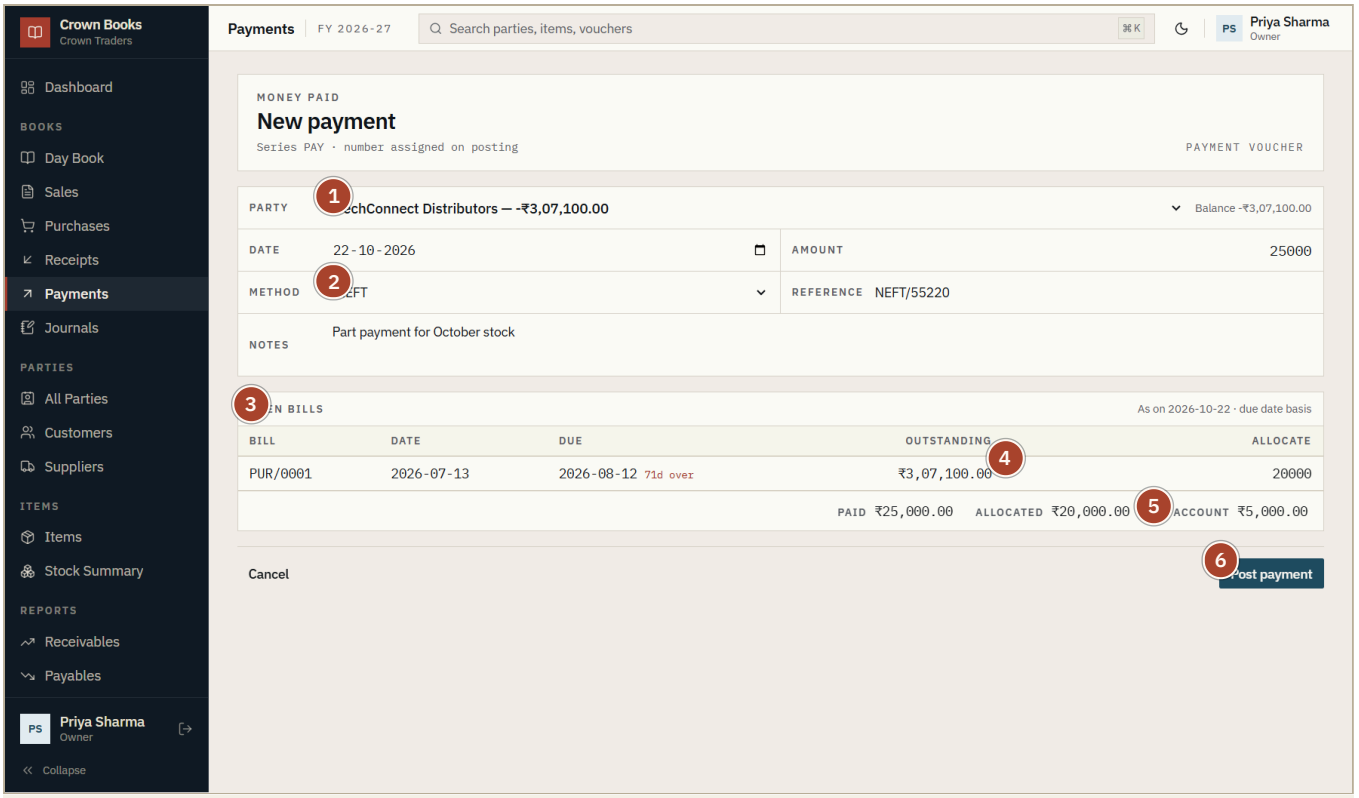

Figure 5.3 A supplier payment. The amount is 25,000, of which 20,000 is allocated to PUR/0001.

1. Supplier and amount paid
2. Payment method and bank reference
3. Open bills for that supplier
4. Allocate against the bill being settled
5. Anything not allocated stays on account
6. Post the payment

1. **Party.** Choose the supplier. The screen shows the current balance.
2. **Date.** The date money left, not the bill date.
3. **Amount.** The total paid, for example 25,000.
4. **Method** and **Reference.** Choose NEFT, UPI, cheque or cash and enter the bank reference.
5. The **Open bills** table lists unpaid purchase bills with their due dates and outstanding amounts.
6. Enter the amount against the bill being settled in **Allocate**. Leave the rest unallocated if it is an advance.
7. Check **Paid**, **Allocated** and **On account** at the bottom.
8. Click **Post payment**.

SITUATION	WHAT TO DO
Pay one bill in full	Allocate the full outstanding amount to that bill.
Part payment	Allocate less than the outstanding. The rest stays open.
Pay several bills	Enter an allocation against each bill in the same payment.
Advance	Leave the allocation blank. The money sits on account until a bill arrives.
Pay more than the bill	Allocate the bill amount and leave the excess on account.

> **CASH AND BANK IN THIS EDITION**
>
> Receipts and payments post to the **Cash** ledger. The **Method** list is a label on the entry screen. To move money between cash and bank, use **Journals** → **New contra** after the receipt or payment. Bank reconciliation is not part of this edition.

5.6 Payables

Open **Reports** → **Payables**. The report shows who you owe, split into amounts not yet due and amounts past the due date.

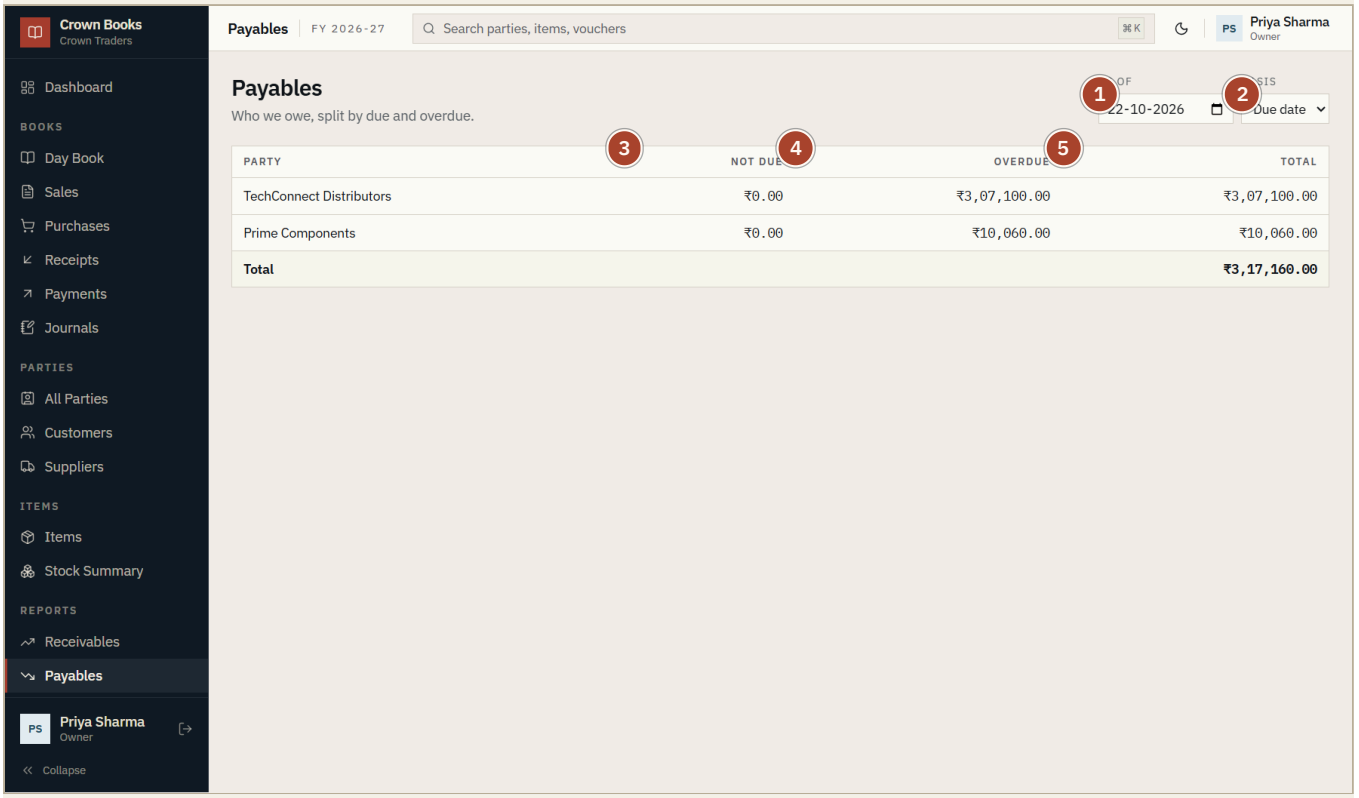

Figure 5.4 Payables as on 22 October 2026. Both suppliers are past their due dates in this example.

1. As-of date: what was unpaid on that day
2. Due date or bill date basis
3. Not yet due
4. Past the due date
5. Supplier total

As of is the date you are looking at. **Basis** decides whether a bill is measured by its bill date or its due date. Use Due date for collection and payment planning; use Bill date when you want the age of the document itself.

5.7 Purchase register

Open **Reports** → **Purchase Register** from the report links or navigate directly. It lists every purchase bill in the period with taxable value, GST, round off and total.

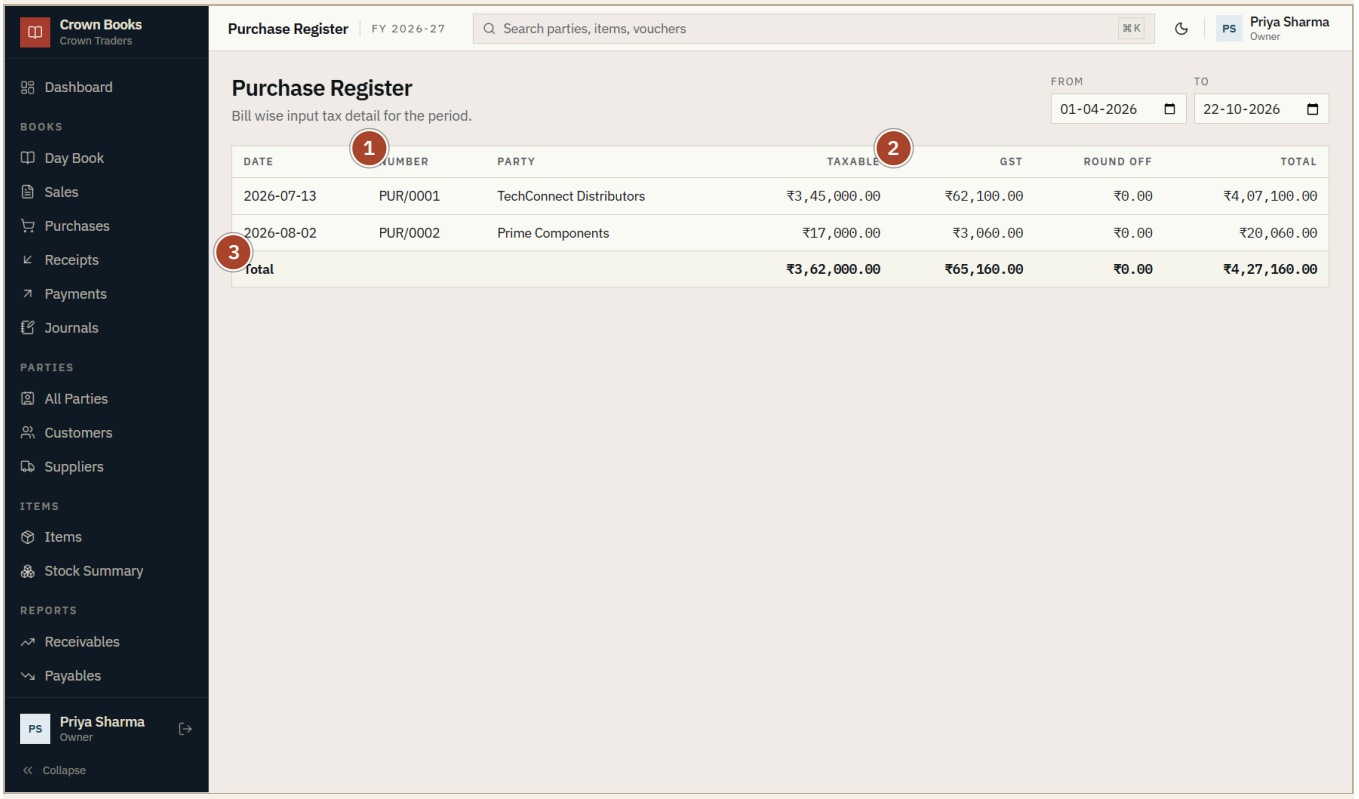

Figure 5.5 The purchase register for the financial year. Totals at the bottom tie to the purchase ledger.

1. Every purchase bill in the period
2. Input GST for the period
3. Totals to tie to the books

5.8 Buying checklist

- [ ] Supplier chosen, not the customer with a similar name.
- [ ] Bill date and due date match the supplier’s bill.
- [ ] Supplier’s bill number entered in Reference.
- [ ] Place of supply is the supplier’s state.
- [ ] Each line has the right quantity and rate.
- [ ] GST rate matches the item, not the default from another item.
- [ ] Total matches the paper bill to the paisa.

06 Selling: invoices and receipts

An invoice records what a customer owes. A receipt records what they paid. Receivables and ageing tell you who to chase and how old the bill is.

IN THIS CHAPTER

- The selling flow
- New sales invoice
- GST and place of supply
- Print or save the invoice
- Receipt from a customer
- Receivables and ageing
- Sales register

6.1 The selling flow

01
Sales invoice
Customer owes you. Stock goes out. GST is recorded.

→

02
Receipt
Money comes in. Allocate it to the invoice it settles.

→

03
Receivables
What is still owed, with ageing and due dates.

6.2 New sales invoice

Open **Books** → **Sales** and click **New invoice**. Every sale is against a customer; a cash sale is recorded as an invoice followed by a receipt.

Before you invoice

- [ ] The customer record exists and the GSTIN is correct.
- [ ] You know the customer’s state for the place of supply.
- [ ] The item has the right GST rate and sale price.
- [ ] The goods are in stock, or you have decided to sell anyway.
- [ ] The order or purchase order number is in front of you.

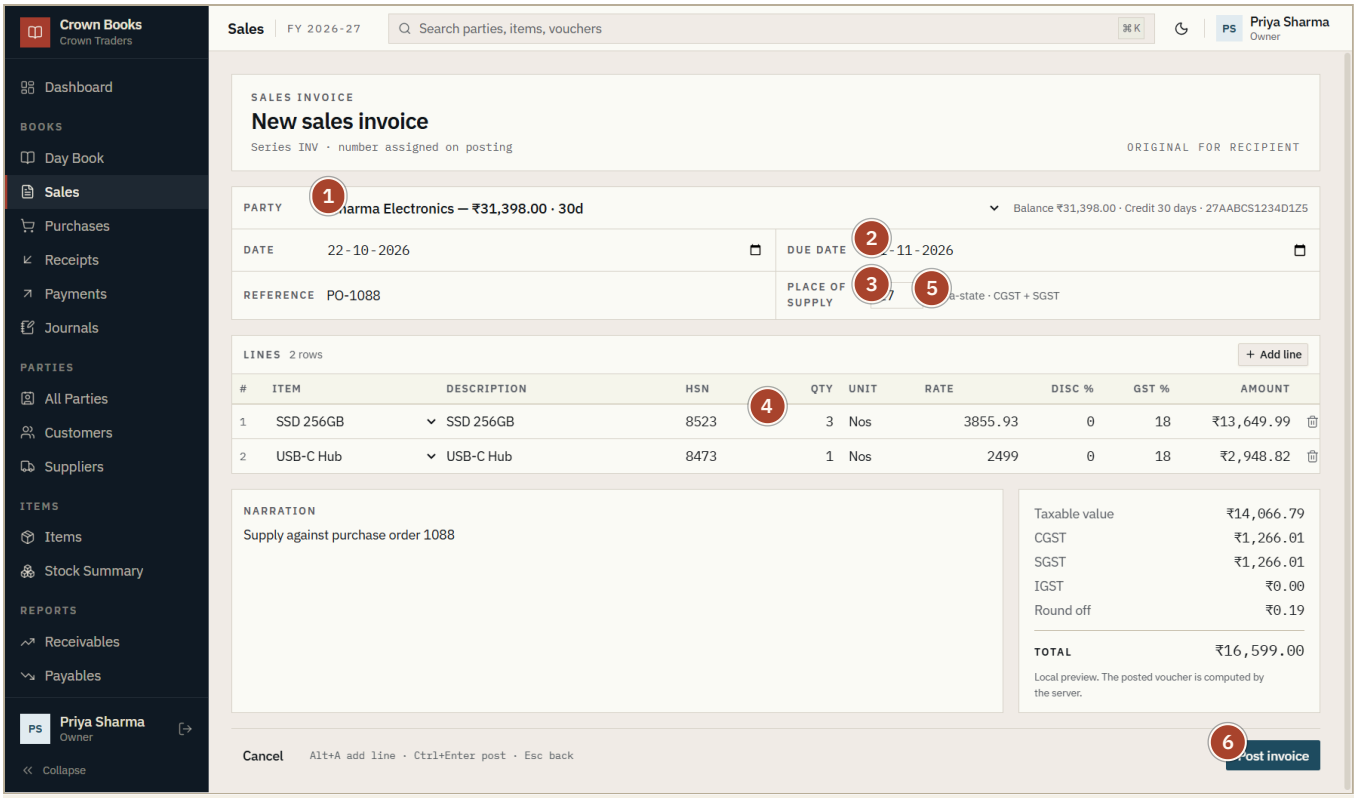

Figure 6.1 A new sales invoice for a Maharashtra customer, so the tax is CGST + SGST.

1. Choose the customer
2. Invoice date and due date
3. Place of supply: customer state for inter-state
4. Item lines with quantity and rate
5. CGST + SGST, or IGST, calculated from the place of supply
6. Post the invoice and assign INV/0003

1. **Party.** Choose the customer. The screen shows their balance, credit days and GSTIN.
2. **Date.** The invoice date. This decides the financial year and the sales register.
3. **Due date.** Filled from the customer's credit days. Change it if the order says otherwise.
4. **Reference.** The customer's purchase order number, if any.
5. **Place of supply.** The customer's state code. Same state as your company gives CGST + SGST; a different state gives IGST.
6. **Add line** for each item. Choose the saved item or type a free-text description.
7. Enter **Qty**, **Rate**, **Disc %** and **GST %**.
8. Check the totals and add a **Narration**.
9. Click **Post invoice**. The number, for example `INV/0001`, is assigned on posting.

> **PLACE OF SUPPLY IS THE MOST COMMON GST MISTAKE**
>
> The place of supply defaults to your company's state. For an out-of-state customer, change it to the customer's state before posting. If you leave it on your own state, the invoice will charge CGST + SGST instead of IGST and the GST return will be wrong.

6.3 GST and place of supply

GST is charged per line. The place of supply decides how the same 18 percent is split.

PLACE OF SUPPLY	WHAT IS CHARGED	EXAMPLE
Same state as the company	CGST + SGST, half the rate each.	Company in 27 (Maharashtra), customer in 27. 18% becomes 9% CGST + 9% SGST.
Different state	IGST at the full rate.	Company in 27, customer in 29 (Karnataka). 18% becomes 18% IGST.

The tax is calculated on the taxable value after the line discount. The total is rounded according to the company setting, usually at the invoice total. The summary on the right shows taxable value, CGST, SGST, IGST, round off and total before you post.

6.4 Print or save the invoice

Open **Sales**, click the invoice number, and use **Print**. In the system print dialog, choose a printer or **Save as PDF**. The printed page carries the company name and GSTIN, the customer, the invoice number and date, the line items with HSN, the tax split and the total.

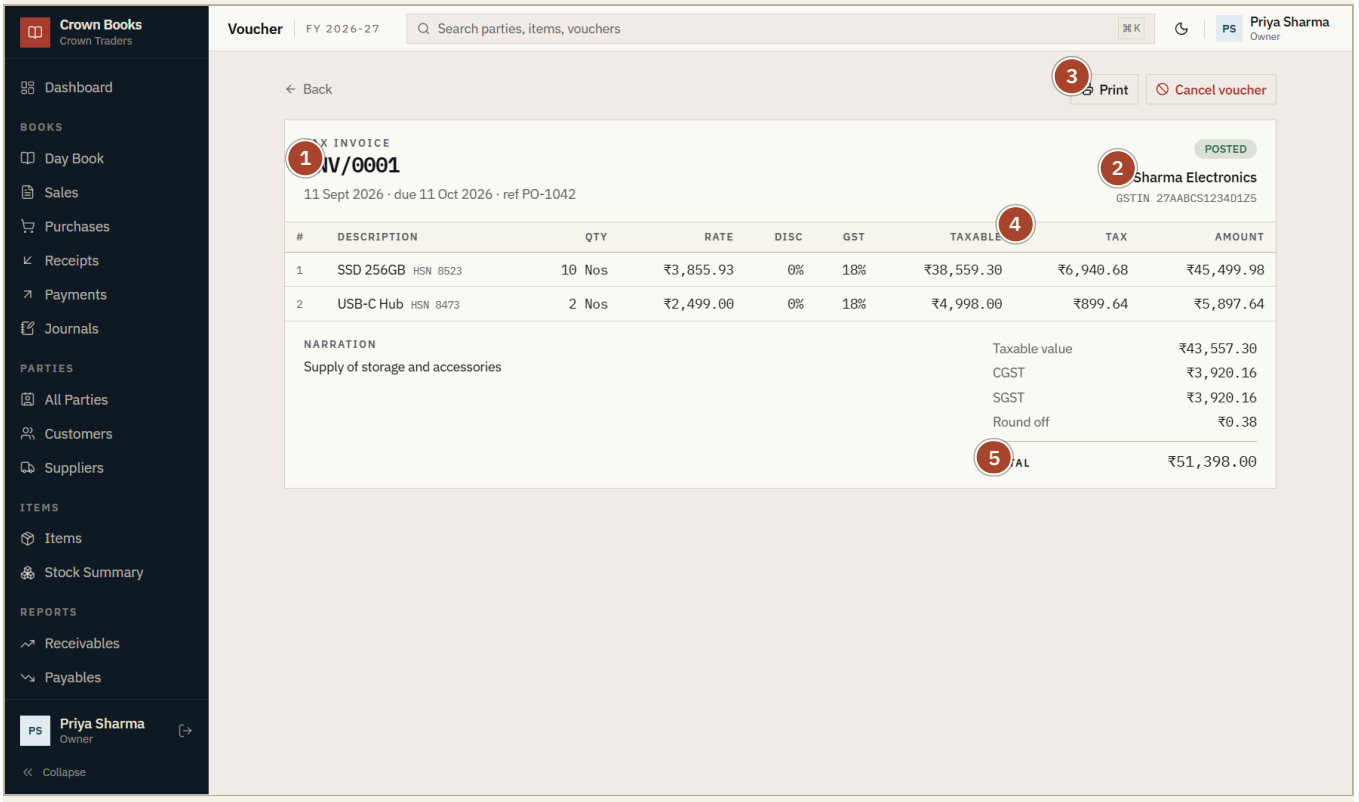

Figure 6.2 A posted sales invoice. The status is POSTED; Print and Cancel voucher are at the top.

1. Invoice number, date and due date
2. Customer and GSTIN
3. Print, or choose Save as PDF in the print dialog
4. Line detail and tax split
5. Amount due from the customer

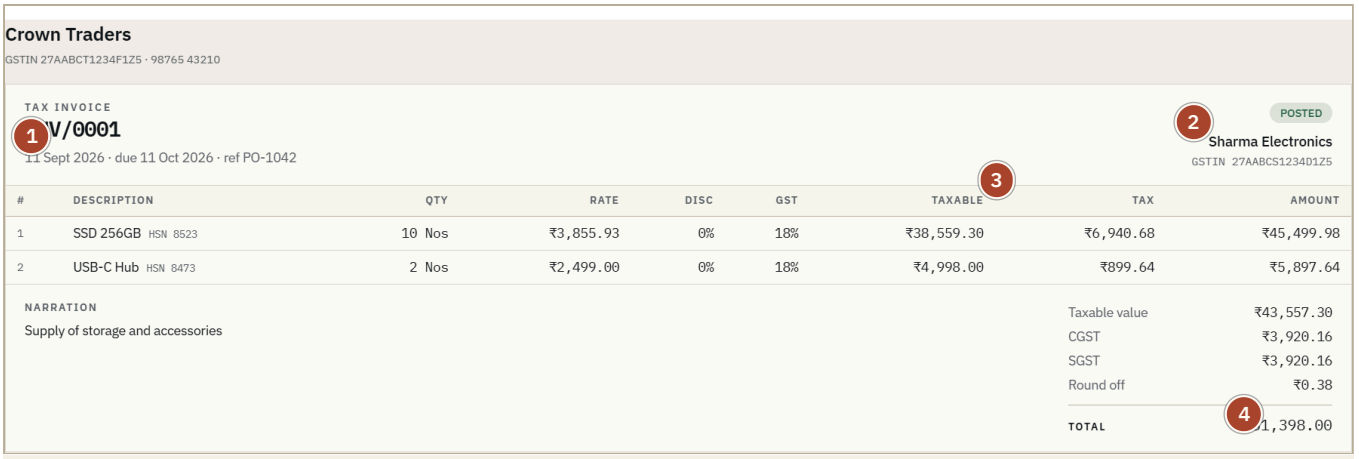

Figure 6.3 What the printed invoice looks like. The navigation and top bar are hidden on paper.

1. Invoice number and date
2. Customer and GSTIN
3. Items, quantity, rate and tax
4. Tax split and total

6.5 Receipt from a customer

Open **Books → Receipts** and click **New receipt**. A receipt can settle one invoice, several invoices, or stay on account as an advance.

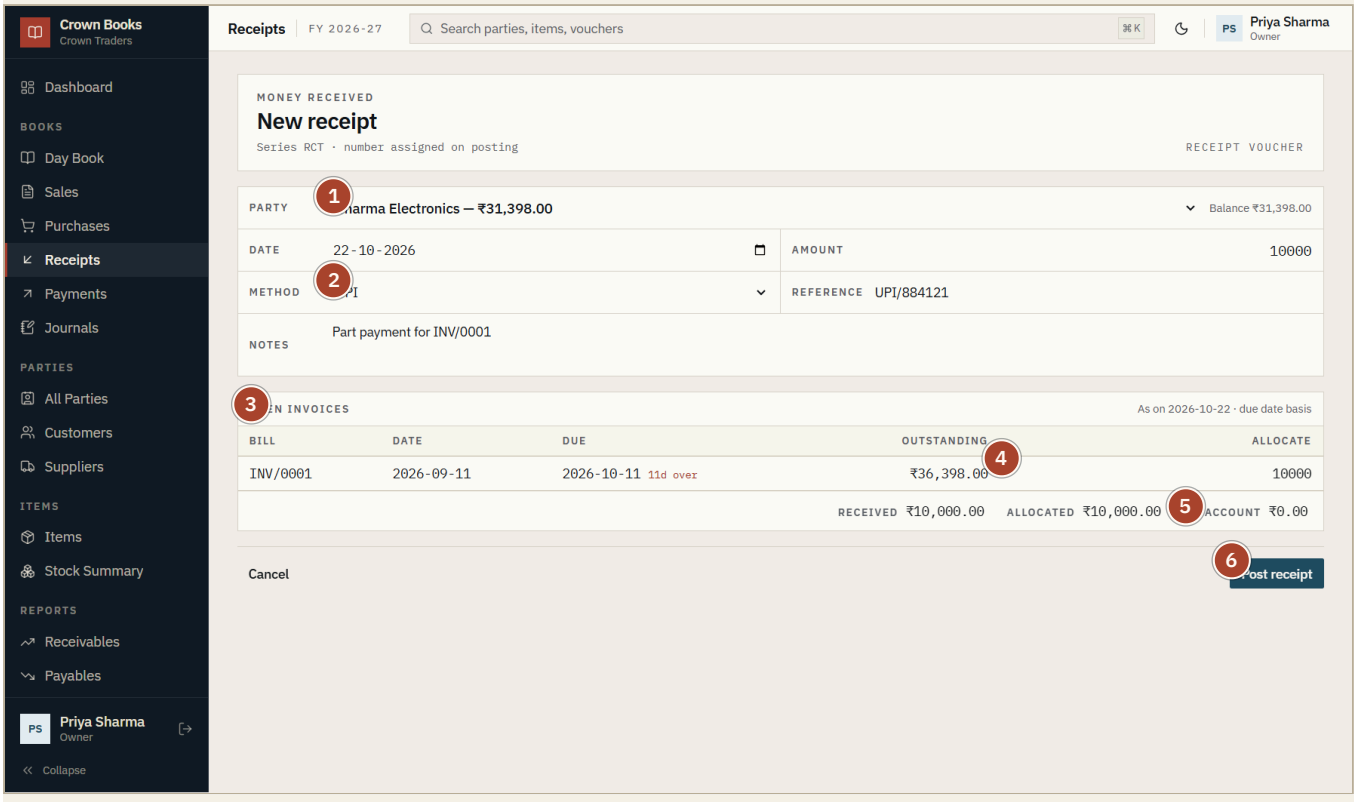

Figure 6.4 A customer receipt. 10,000 is received and allocated to INV/0001.

1. Customer and amount received
2. Method and reference for the receipt
3. Open invoices
4. Allocate to the invoice being settled
5. Unallocated money stays as an advance
6. Post the receipt

1 **Party.** Choose the customer. The screen shows the current balance.

2. **Date.** The date money was received.
3. **Amount.** The total received.
4. **Method** and **Reference.** UPI, NEFT, cheque or cash, and the reference number.
5. The **Open invoices** table lists unpaid invoices with due dates and outstanding amounts.
6. Enter the amount against the invoice being settled in **Allocate**.
7. Check **Received**, **Allocated** and **On account**.
8. Click **Post receipt**.

> **ADVANCES AND PART PAYMENTS**
>
> A receipt larger than the open invoice leaves the excess on account. A receipt with no allocation is an advance. When the next invoice is posted, use a new receipt or adjust the advance through a journal if your accountant prefers.

6.6 Receivables and ageing

Open **Reports → Receivables** for the customer totals, and **Reports → Ageing** for the age buckets.

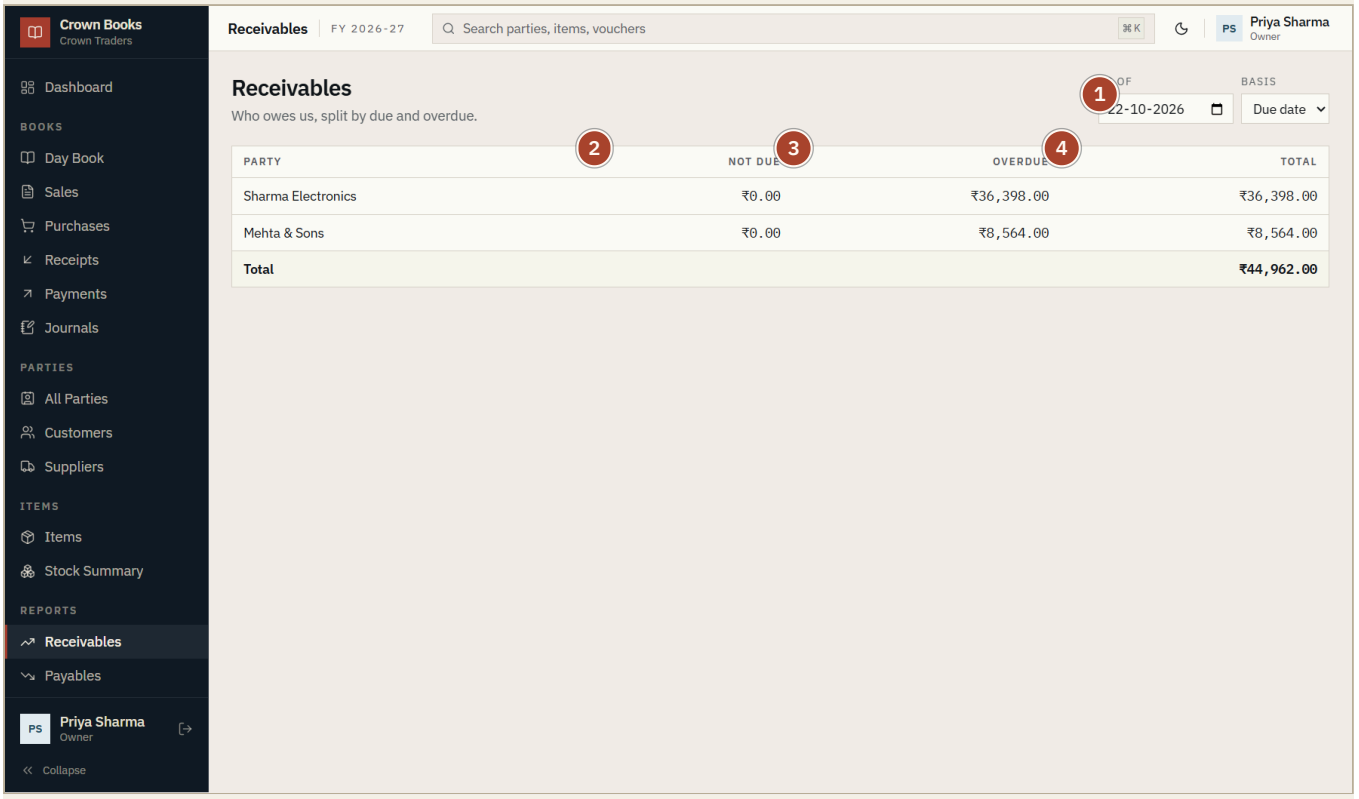

Figure 6.5 Receivables as on 22 October 2026. The overdue column is the money to chase first.

1. Receivables as on today, or another date
2. Not yet due
3. Overdue amount
4. Total owed by each customer

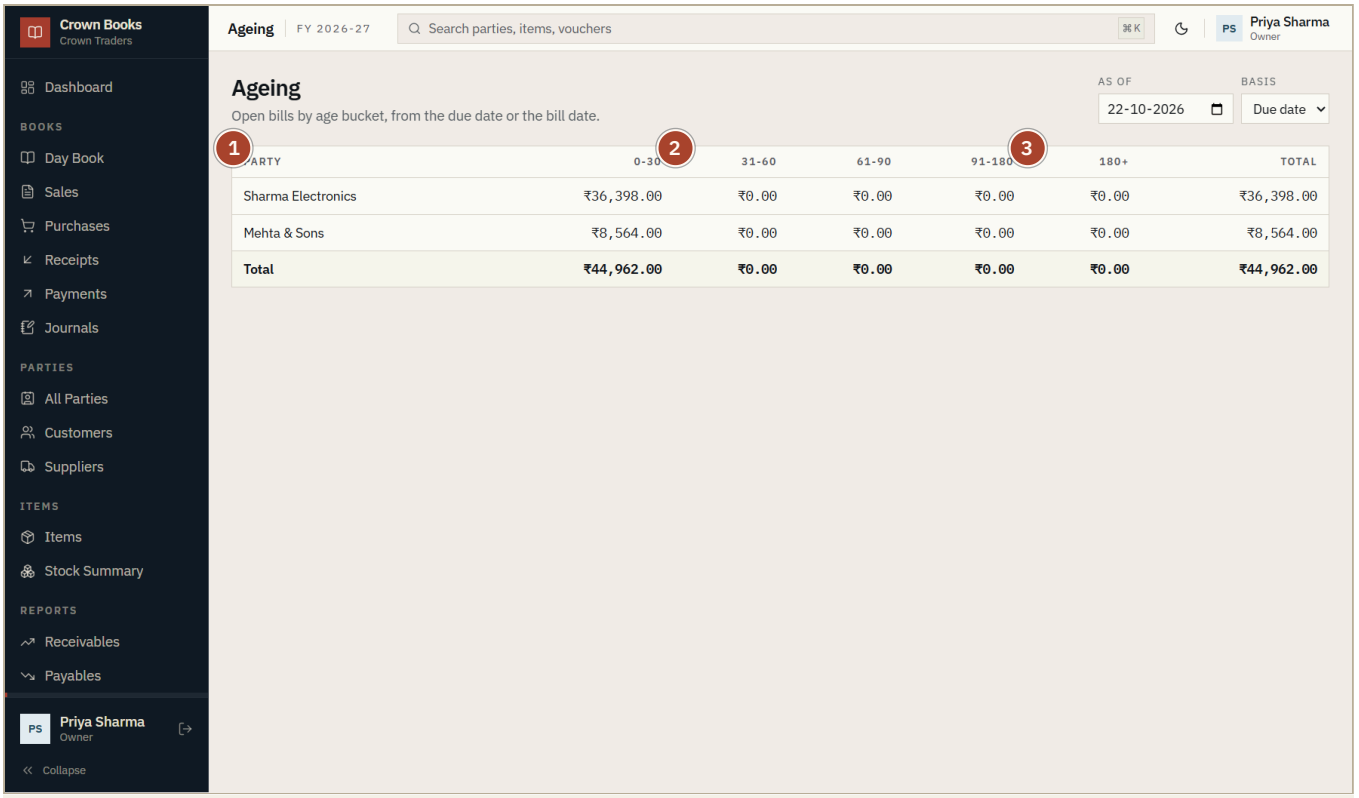

Figure 6.6 Ageing by party. Bills are grouped into 0–30, 31–60, 61–90, 91–180 and 180+ days.

1. Ageing by party
2. Buckets: 0-30, 31-60, 61-90, 91-180, 180+
3. Chase the oldest first

Receivables shows two numbers per customer: not yet due, and overdue. Ageing splits the overdue amount into buckets. Use the **Basis** selector to age by due date (the default) or by bill date. A bill that is not yet due sits in Not due even if the invoice is old.

> **WHO TO CHASE FIRST**
>
> Start with the largest amount in 61–90 and 91–180, not the largest total. Then check 31–60 for customers who are about to become a bigger problem. A 180+ balance needs a decision: collect, write off, or ask the accountant.

6.7 Sales register

The sales register lists every invoice in a period with taxable value, GST, round off and total. It is the first check before a GST return or a management review.

- Every invoice in the period is present, and none is cancelled by mistake.
- The total GST agrees with the output tax in the trial balance.
- The invoice with the largest value has the right place of supply.

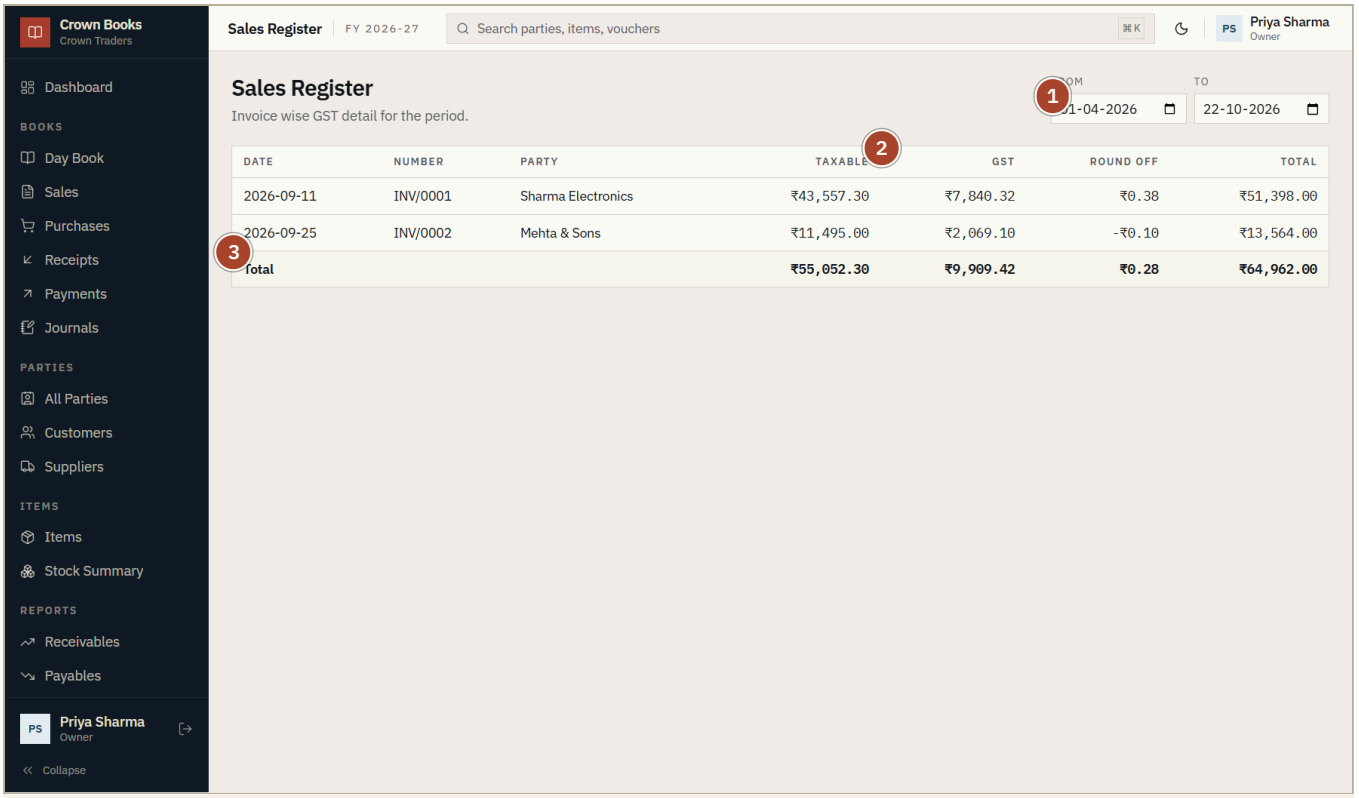

Figure 6.7 The sales register for the financial year, with the period total at the bottom.

1. From and To dates
2. Taxable value and GST for each invoice
3. Period totals

6.8 Selling checklist

- [ ] Customer chosen, not a supplier with a similar name.
- [ ] Invoice date and due date are correct.
- [ ] Place of supply is the customer’s state, not the company’s default.
- [ ] Each line has the right quantity, rate and GST rate.
- [ ] Discount, if any, is on the correct line.
- [ ] Total matches the order or the quotation.
- [ ] Receipt allocated to the invoice, not left on account by mistake.
- [ ] Invoice printed or saved as PDF and sent to the customer.

07 Adjustments and corrections

The books keep a history. A mistake is corrected by cancelling the voucher and entering a new one, or by posting a journal. Nothing is deleted.

IN THIS CHAPTER

- Posted means posted
- Cancel a voucher
- Journal adjustments
- Contra: cash to bank
- The journals list
- When to ask your accountant

7.1 Posted means posted

A posted voucher is part of the audit trail. You cannot edit its lines, party, date or amount. If it is wrong, cancel it with a reason and enter a fresh voucher. The cancelled voucher stays visible with status **CANCELLED**, its number is not reused, and its ledger and stock effect is reversed.

7.2 Cancel a voucher

1. Open the voucher from Sales, Purchases, Receipts, Payments, Day Book or a report link.
2. Click **Cancel voucher** at the top right.
3. Enter a **Reason** of at least three characters. “Wrong party” is enough; “test” is not useful.
4. Click **Cancel voucher** in the dialog. The status becomes CANCELLED.
5. Enter the corrected voucher from the beginning.

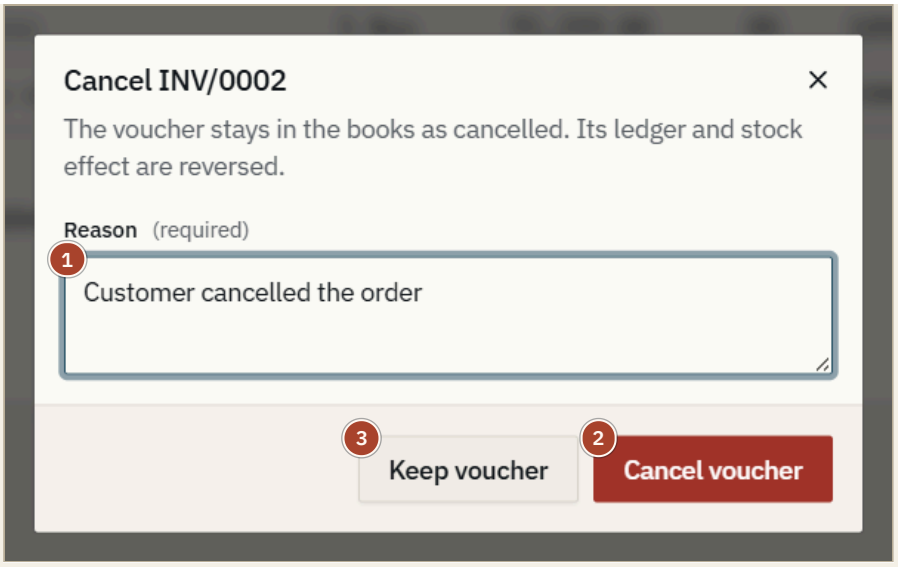

Figure 7.1 Cancelling a voucher. The reason is required; Keep voucher backs out unchanged.

1. A reason is required
2. The voucher stays, marked cancelled
3. Back out without changing anything

> **DO NOT CANCEL JUST TO HIDE A BILL**
>
> Cancellation reverses the ledger and stock effect, but the voucher remains in the day book with its reason. It is for corrections, not for removing a real transaction from history.

7.3 Journal

A journal is a manual double entry. Use it for adjustments that are not a sale, purchase, receipt or payment: owner capital, depreciation, an expense paid from cash, or an accountant's correction.

Every journal needs at least two lines, and the total debits must equal the total credits. The screen shows **Balanced** in green only when they match. The **Post** button stays disabled when the journal is not balanced.

> **BEFORE YOU JOURNAL**
>
> Write down the two account names and the amount before you open the screen. If you cannot name both accounts, stop and ask the accountant. A journal entered to "see if it works" is harder to clean up than a phone call.

EXAMPLE	DEBIT	CREDIT
Owner introduces capital	Cash	Owner Capital
Office expense paid in cash	Office Expenses	Cash
Depreciation for the month	Depreciation	Accumulated Depreciation
Correct an over-posted expense	The account that was wrongly debited	The expense account

If you are unsure which accounts to use, do not guess. A wrong journal is harder to find than a missing one. Ask the accountant to give you the two account names and the amount.

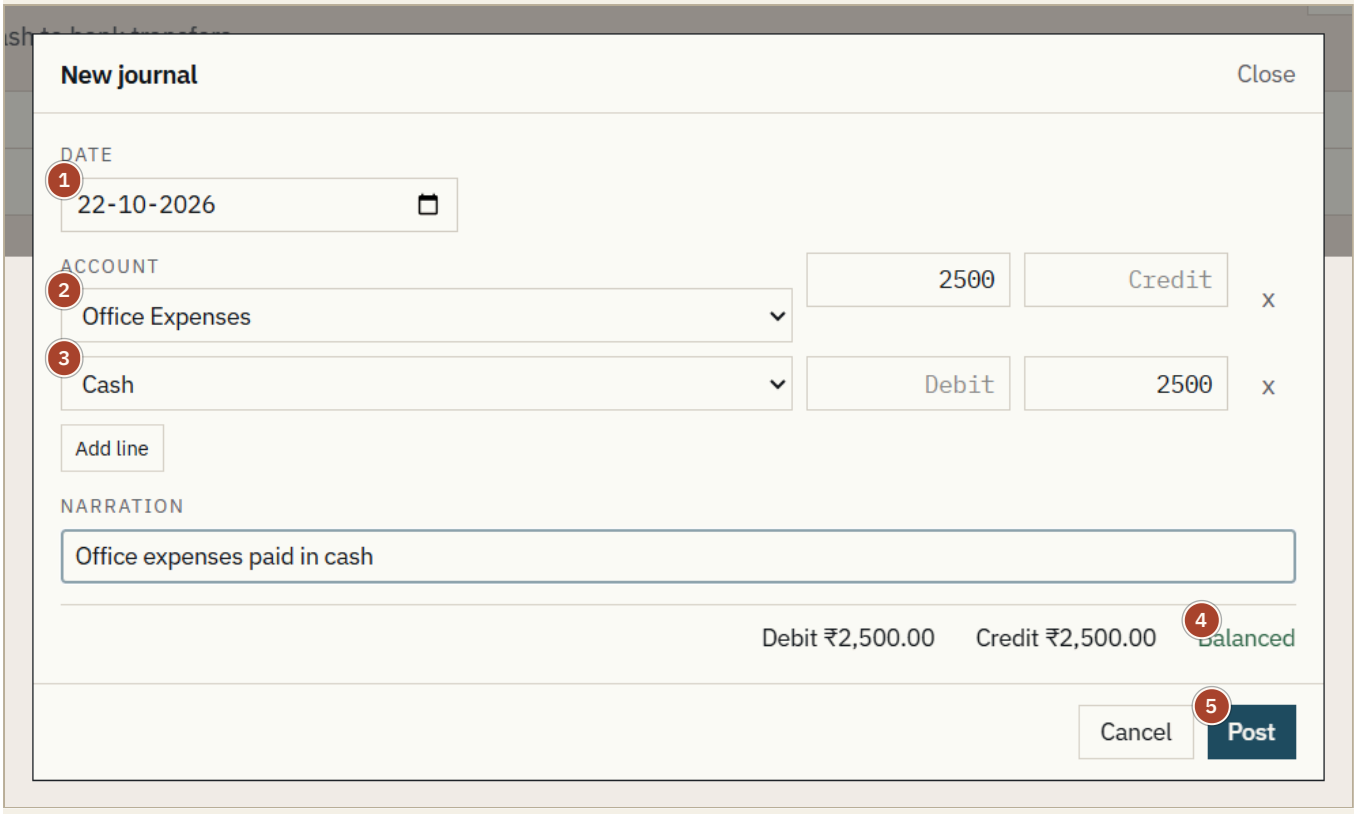

Figure 7.2 A balanced journal: Office Expenses is debited, Cash is credited, both for 2,500.

1. Date of the adjustment
2. Debit the expense
3. Credit cash or bank
4. Debits must equal credits
5. Post the journal

7.4 Contra

A contra moves money between two cash or bank accounts. The common case is depositing cash into the bank. It is not a receipt or a payment, so it does not affect a customer or supplier.

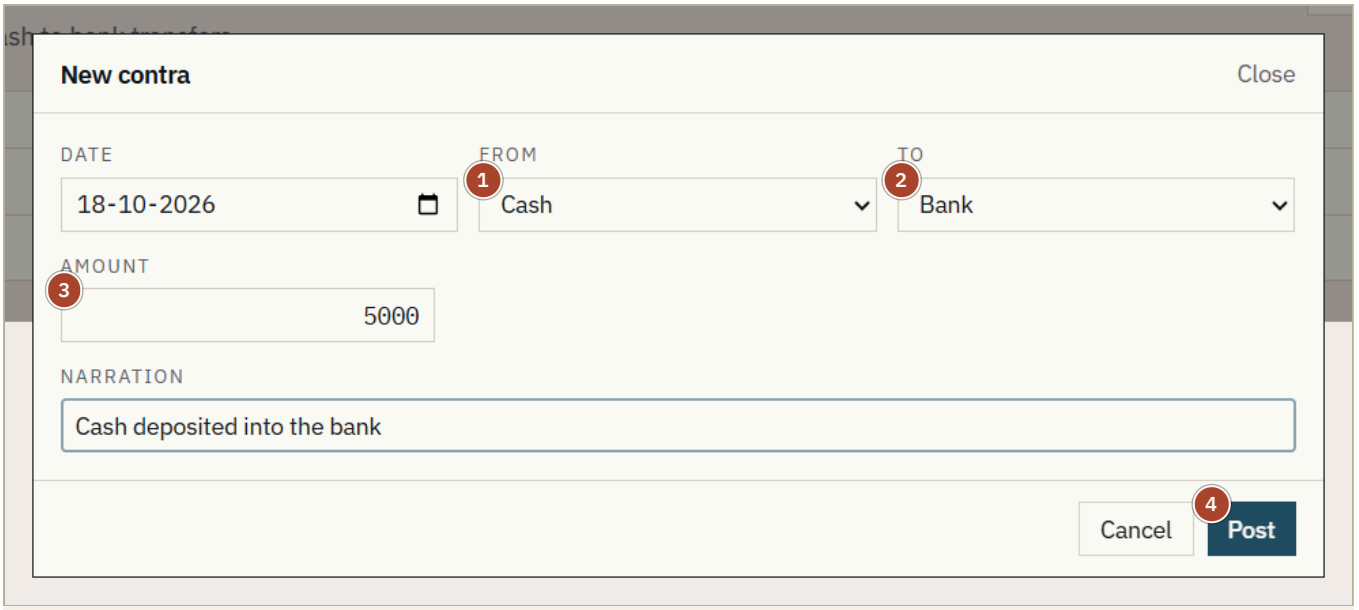

Figure 7.3 A contra for 5,000 from Cash to Bank. The narration explains the transfer.

1. From account, usually Cash
2. To account, usually Bank
3. Amount moved
4. Post the transfer

1. Open **Books → Journals** and click **New contra**.
2. Choose the **From** account, usually Cash.
3. Choose the **To** account, usually Bank.
4. Enter the **Date** and **Amount**.
5. Add a **Narration**, for example “Cash deposited into the bank”.
6. Click **Post**.

7.5 The journals list

The Journals page lists both manual journals and contra transfers, newest first. The Type column tells you which one it is; the Number column is the voucher you can quote to your accountant.

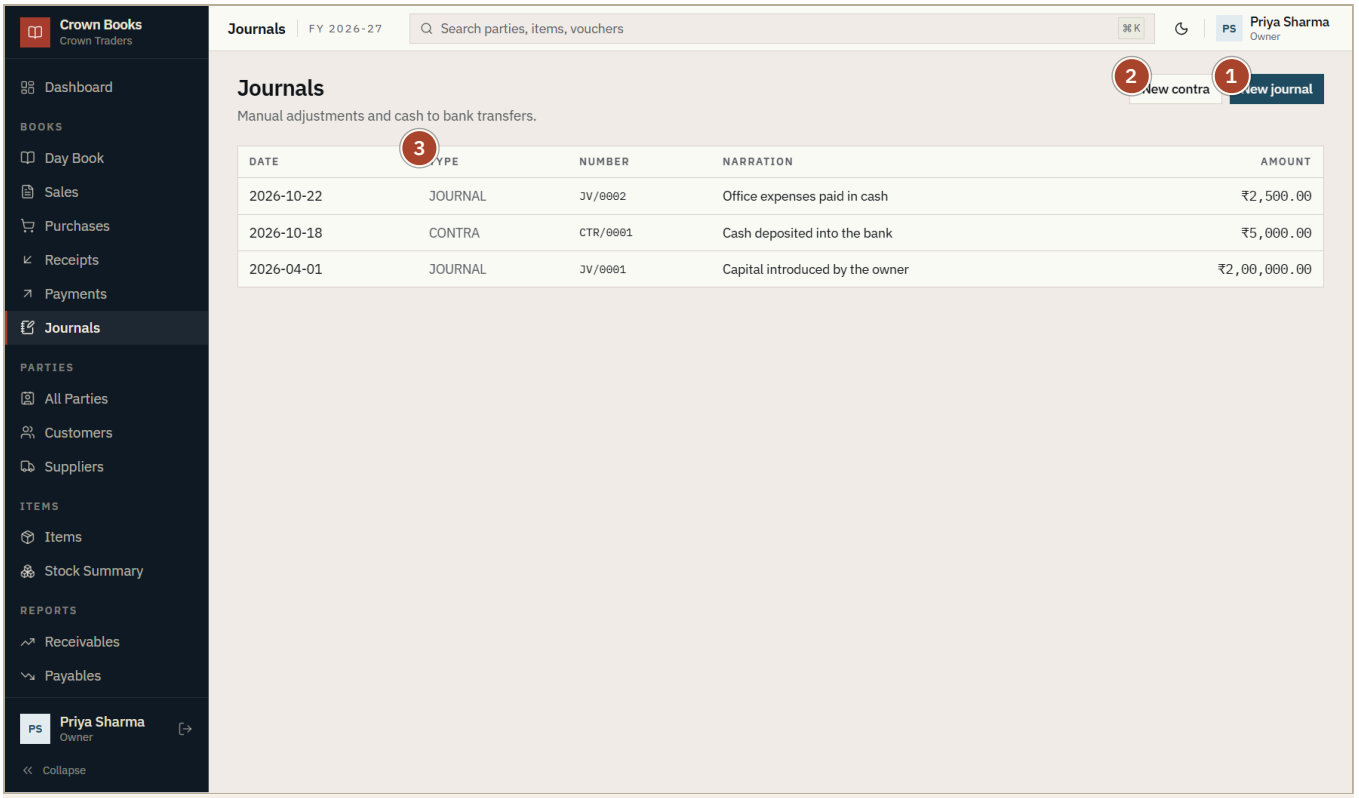

Figure 7.4 Posted journals and contras, with the narration and amount.

1. Manual journal for adjustments
2. Contra for cash to bank
3. Posted journals and transfers

7.6 When to ask your accountant

- Opening balances do not tie to the old trial balance.
- A GST return is due and the output or input tax looks wrong.
- You need depreciation, prepaid expenses, provisions or any year-end adjustment.
- A party balance is negative or a supplier balance is positive and you cannot explain it.
- The trial balance does not say “Debits equal credits.”

Which correction do I need?

THE MISTAKE	WHAT TO DO
Wrong party, date, item or amount on a posted bill	Cancel it with a reason and enter the correct voucher.
Wrong GST rate or place of supply on a posted invoice	Cancel and re-enter. Do not patch it with a journal; the GST return needs the corrected invoice.
Expense posted to the wrong ledger	Post a journal: debit the correct expense, credit the wrong one.
Owner put money into the business	Journal: debit Cash or Bank, credit Owner Capital.
Cash deposited into the bank	Contra: from Cash, to Bank. Not a receipt or payment.

08 Reports

Reports are reads of posted vouchers. They do not store totals, so a cancelled voucher disappears from the report and a new one appears immediately.

IN THIS CHAPTER

- How reports work
- Day book
- Trial balance
- Profit and loss
- Balance sheet
- Which report answers which question

8.1 How reports work

Every report reads the posted vouchers for the current company. A cancelled voucher is excluded from the ledger effect. The date controls mean different things:

CONTROL	MEANING
From / To	A period, for example 1 April to 22 October. Used by profit and loss, balance sheet and registers.
As of	A single date. Used by receivables, payables and ageing: what was open on that day.
Basis	Age by due date (default) or by bill date. Due date is better for collection; bill date is better for document age.

THREE CHECKS BEFORE YOU TRUST A REPORT

1. Is the voucher posted, not cancelled?
2. Is the date range or as-of date the one you meant?
3. Does the trial balance still say “Debits equal credits”?

8.2 Day book

The day book lists every voucher in date order, whatever its type. It is the first place to look when you cannot find a document.

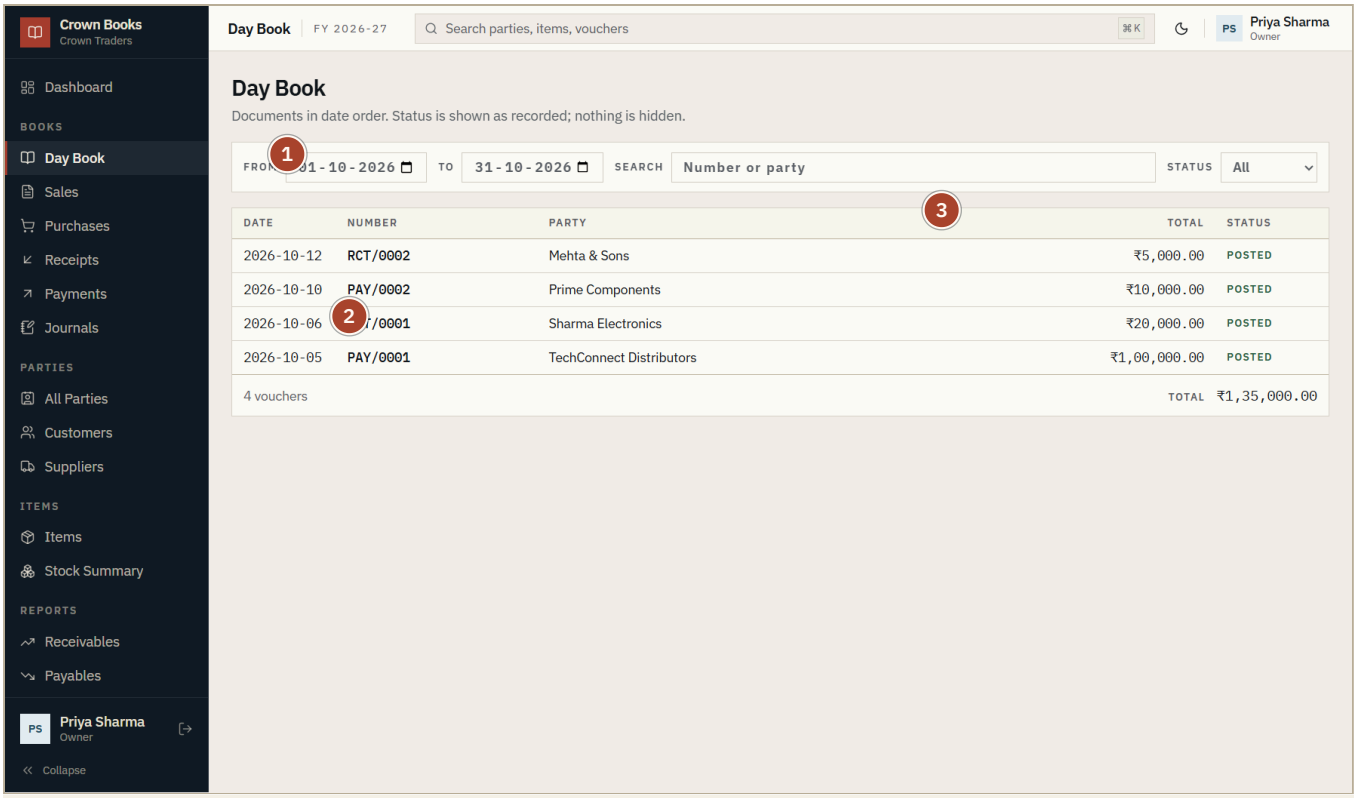

Figure 8.1 The day book for October. Click any number to open the voucher.

1. Filter by date, status or text
2. Click a number to open the voucher
3. Party and total

The date range defaults to the current month. Change **From** and **To** for an older period, use **Search** for a number or party, and filter by **Status** to see only posted or cancelled documents.

- The newest voucher is at the top of the list.
- The number is the permanent one; quote it when asking for help.
- A cancelled voucher remains visible with status CANCELLED.

8.3 Trial balance

The trial balance lists every account with a debit or credit balance. If the total of the debit column equals the total of the credit column, the ledger is internally consistent. It does not prove that the business made a profit; it proves that every voucher had two sides.

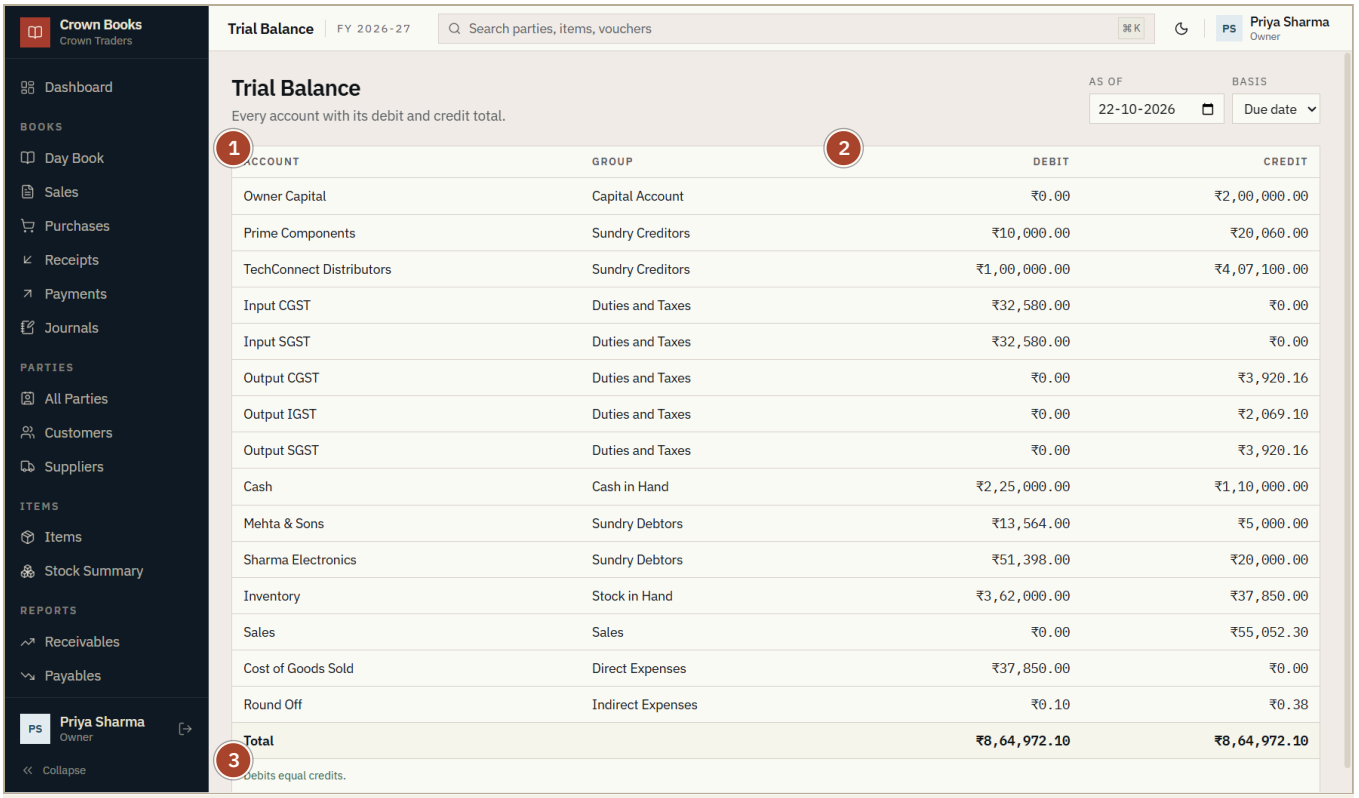

Figure 8.2 The trial balance. The green line at the bottom confirms that debits equal credits.

1. Every account with a balance
2. Debit and credit columns
3. The proof: debits equal credits

Read it by group. Assets and expenses normally sit on the debit side; liabilities, equity and income on the credit side. A party can appear on either side because the balance is net.

8.4 Profit and loss

Profit and loss answers one question: did the business make money in this period? It shows income, expenses and the net profit. The period is controlled by **From** and **To**.

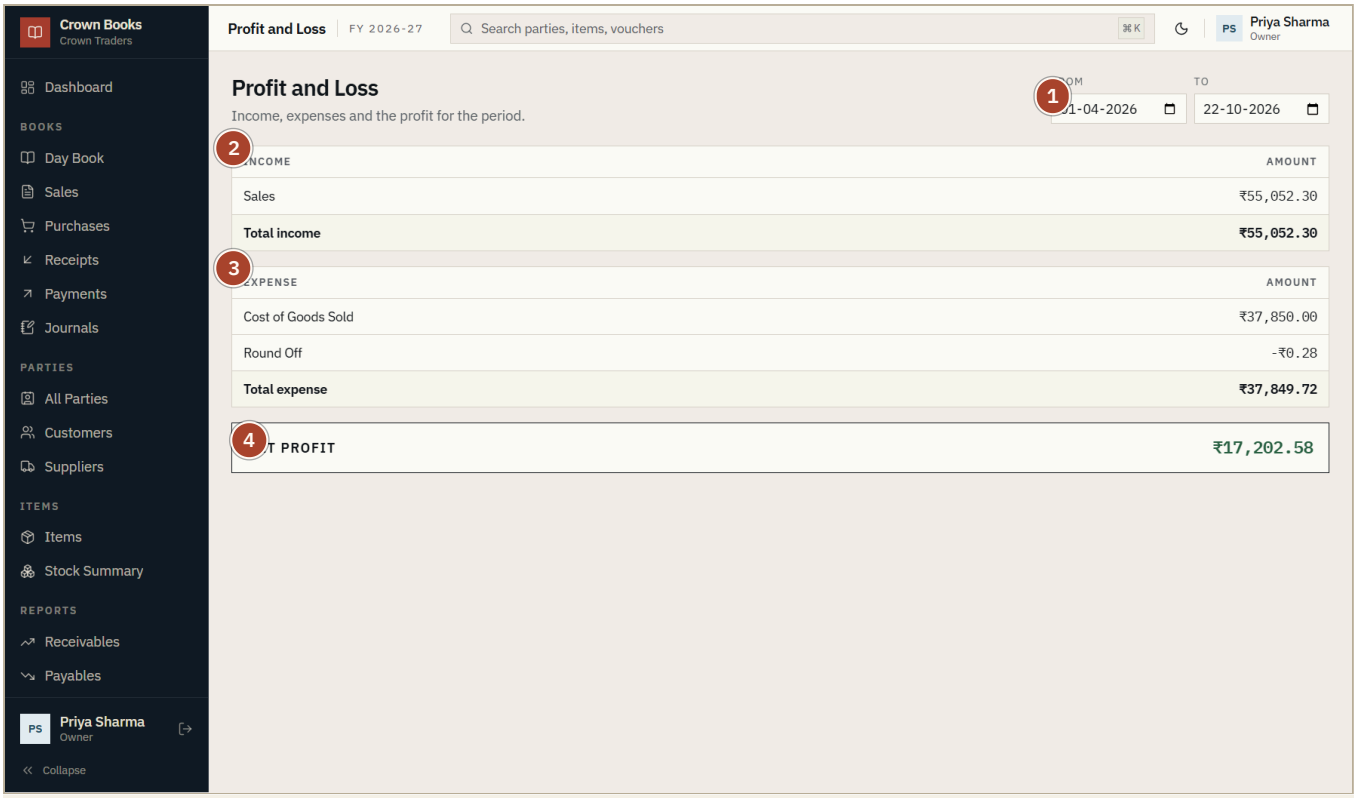

Figure 8.3 Profit and loss for 1 April to 22 October 2026. Cost of goods sold is the cost of the items that were sold.

1. From and To set the period
2. Income accounts
3. Expense accounts
4. Net profit for the period

Sales is shown net of returns. Cost of goods sold is the weighted average cost of the stock that left. Expenses include round off and any journals you posted to expense accounts. Net profit is the green figure at the bottom; a loss is shown in red.

8.5 Balance sheet

The balance sheet is a photograph at a date: what the business owns, what it owes, and the owner's stake. It must satisfy:

```
Assets = Liabilities + Equity
```

Assets

Cash, bank, stock, money customers owe you, and things the business owns.

Liabilities and equity

Suppliers, loans, GST payable, owner capital and the profit kept in the business.

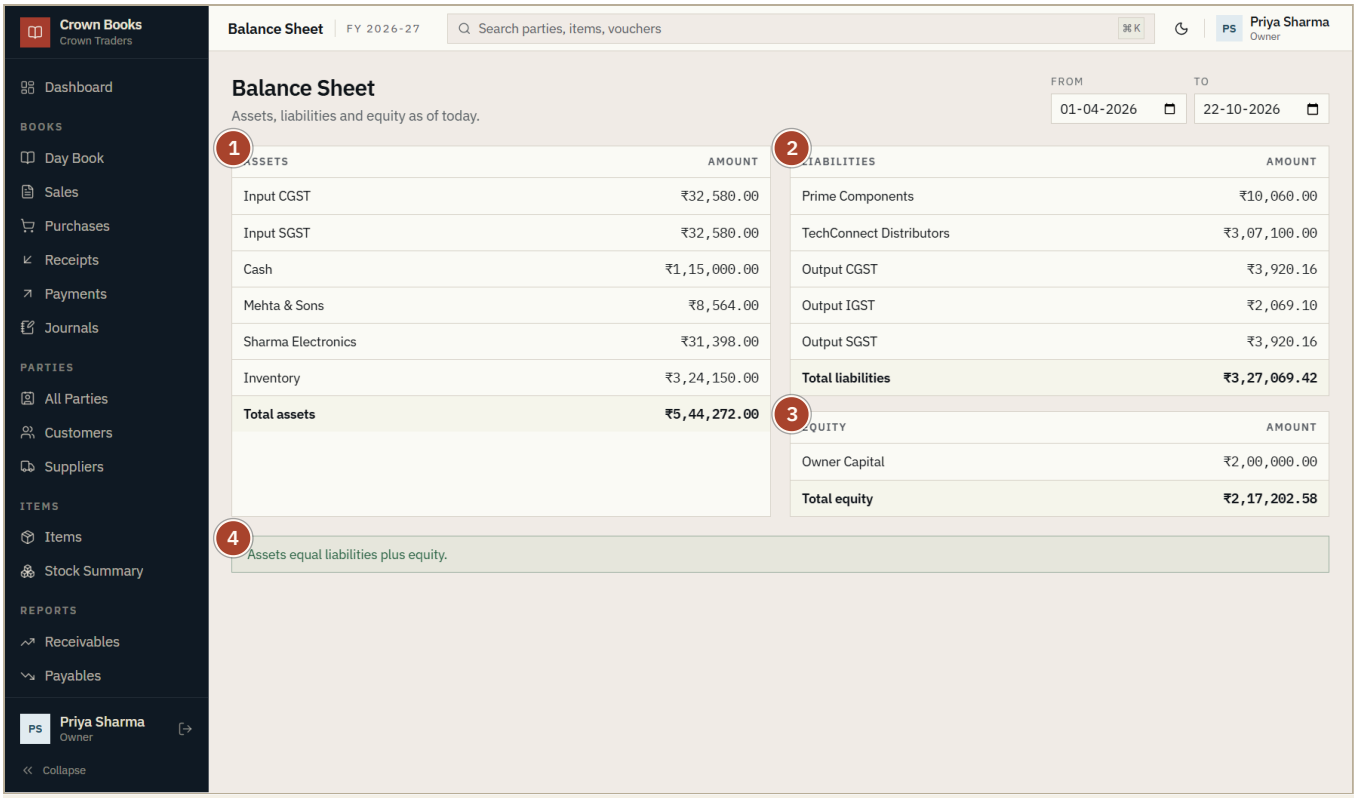

Figure 8.4 The balance sheet. Equity includes owner capital and the current period profit.

1. What the business owns
2. What it owes
3. Owner stake plus current profit
4. The check: assets equal liabilities plus equity

Inventory is valued at weighted average cost. Customer and supplier balances are net. The current period profit is added to equity automatically, so the sheet balances without a manual closing entry.

8.6 Report map

REPORT	QUESTION IT ANSWERS	WHEN TO USE IT
Receivables	Who owes us, and how much is overdue?	Weekly collection review.
Ageing	How old are the unpaid bills?	Prioritise the oldest debts.
Payables	Who do we owe, and what is due?	Weekly payment run.
Day book	What was posted on a date?	Find a voucher or check an entry.
Sales register	What did we sell, and what GST did we charge?	Before a GST return or a sales review.
Purchase register	What did we buy, and what input GST was recorded?	Before a GST return or a cost review.
Trial balance	Do the books balance?	Month end, before any report is trusted.
Profit and loss	Did we make money this period?	Monthly management review.
Balance sheet	What do we own and owe?	Month end, bank or investor review.

09 Backup and safety

The books live in one SQLite file on this computer. A backup is a copy of that file. Restore is deliberately manual so that a live database is never swapped underneath the app.

IN THIS CHAPTER

- Create a backup
- Restore a backup
- When to back up
- Safety rules
- This computer only

9.1 Create a backup

Open **Admin** → **Backup** and click **Create backup**. The app writes a timestamped copy, for example `crown-books-2026-10-22T09-15-00-000Z.db`, into the backup folder next to the database.

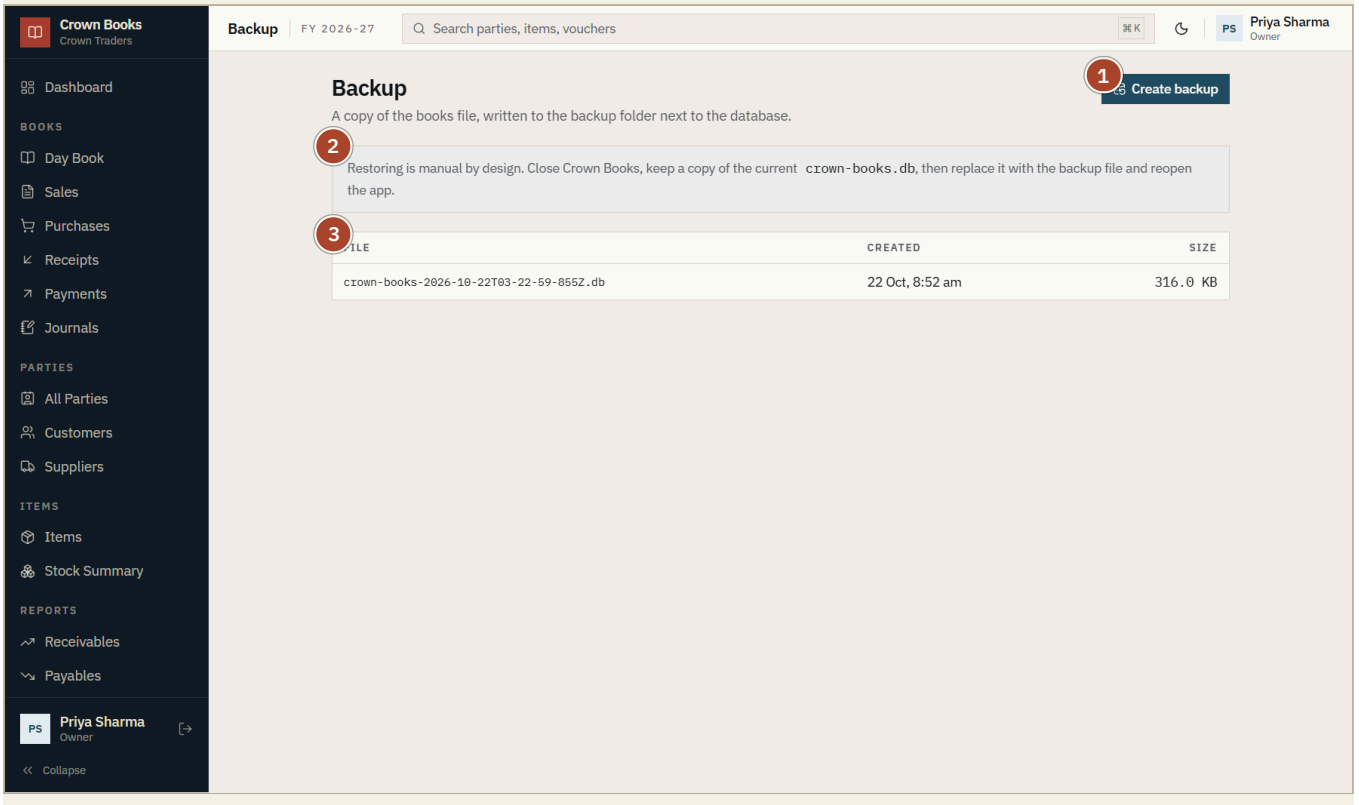

Figure 9.1 The backup screen. Each row is a full copy of the books at that moment.

1. Create a copy now
2. Restore is done outside the app, with it closed
3. Every backup with its timestamp and size

The file name, creation time and size are listed. A backup is a complete copy; it is not a delta. Keep at least one copy on a different drive or a USB stick, not only on the same laptop.

9.2 Restore a backup

> **CLOSE THE APP FIRST**
>
> Restoring while Crown Books is open can corrupt the database. Close the app completely, including any window in the taskbar, before replacing the file.

1. Create a fresh backup of the current books, even if they are wrong. It is your safety net.
2. Close Crown Books.
3. Open the app data folder. On Windows this is usually `%APPDATA%\crown-books`.
4. Rename the current `crown-books.db` to `crown-books.before-restore.db`.
5. Copy the chosen backup from the `backups` folder into the app data folder.
6. Rename the copy to `crown-books.db`.
7. Open Crown Books and sign in. Check the dashboard, trial balance and a recent invoice.

The backup folder is usually `%APPDATA%\crown-books\backups`. If your installation uses a different folder, ask your administrator before moving files.

9.3 When to back up

WHEN	WHY
Before the first real bill	So you can return to an empty, known state.
Every day after posting	The day’s work is the most expensive thing to lose.
Before a GST return	Freeze the numbers you are about to file.
Before a restore or upgrade	Keep a copy of the current state even if it is imperfect.
Every Friday, off the machine	Protect against disk failure, theft or ransomware.
At month end	A clean copy for the accountant.

9.4 Safety rules

- Do not edit the database with another program while Crown Books is open.
- Do not copy the app folder to another computer. The install lock will refuse to run, and the data may not be the same.
- Do not restore a backup over a live database. Close the app first.
- Do not keep every backup on the same laptop. Use a second drive or a USB stick.

9.5 This computer only

Crown Books is offline by design. There is no cloud sync, no remote login and no automatic off-site copy. That is a feature for privacy and a risk for disaster recovery. The backup routine is the disaster recovery plan.

Test a restore before you need it

- [ ] Create a backup and note the file name.
- [ ] Close the app and follow 9.2 on a quiet day.
- [ ] Open the dashboard and check the receivables figure.
- [ ] Open the most recent invoice and confirm it prints.
- [ ] Post one test receipt, then cancel it and note the reason.
- [ ] Keep the pre-restore copy until you are satisfied.

> **THE 3-2-1 RULE, IN PLAIN LANGUAGE**
>
> Keep **3** copies, on **2** different kinds of storage, with **1** copy off the computer. For a small shop, that can be the live database, a daily backup on the laptop, and a weekly copy on a USB drive kept elsewhere.

Backup log

Print this page or keep a note in the shop. A backup is only real when someone has checked that it opens and contains the right day’s work.

DATE	FILE NAME	KEPT WHERE	CHECKED BY

10 Reference

Shortcuts, numbering, messages, the words your accountant uses, and the routine that keeps the books clean.

IN THIS CHAPTER

- Keyboard shortcuts
- Voucher series and status
- Messages and fixes
- Glossary
- Daily, weekly and monthly routine
- Not active in this edition

10.1 Keyboard shortcuts

SHORTCUT	WHERE	WHAT IT DOES
`Alt + A`	Sales and purchase entry	Adds a new line.
`Ctrl + Enter`	Sales and purchase entry	Posts the voucher.
`Esc`	Sales and purchase entry	Goes back without posting.
`Tab`	Every form	Moves to the next field.
`Ctrl + P`	Voucher detail	Opens the print dialog (the Print button is safer).

10.2 Voucher series and status

SERIES	DOCUMENT	WHAT IT DOES
`INV/`	Sales invoice	Customer owes you; stock goes out; output GST.
`PUR/`	Purchase bill	You owe the supplier; stock comes in; input GST.
`RCT/`	Receipt	Money received from a customer.
`PAY/`	Payment	Money paid to a supplier.
`JV/`	Journal	Manual adjustment; debits must equal credits.
`CTR/`	Contra	Cash to bank or bank to cash.
`OPN/`	Opening	The one-time opening balances voucher.
`CN/ · DN/`	Credit / debit note	Reserved routes in this edition; not exposed as a screen.

Status is either POSTED or CANCELLED. Posted documents count in reports. Cancelled documents stay visible but their ledger and stock effect is reversed. A number is never reused.

10.3 Messages and fixes

MESSAGE OR SYMPTOM	WHAT IT MEANS AND WHAT TO DO
“Debits equal credits.”	The trial balance is consistent. No action.
“The books do not balance.”	Stop. Take a backup and ask your accountant; do not post more entries to hide it.
“Opening balances have already been posted”	Only one opening voucher is allowed. Use a journal for corrections.
“Choose customer, supplier, or both”	The party role is missing. Edit the party while it is being created; roles are fixed after saving.
“GSTIN must be 15 characters”	Count the characters. Remove spaces and dashes.
“State code: two digits”	Use 27, not “Maharashtra” or “MH”.
“Password must be at least 8 characters”	Use a longer password. There is no email reset in this edition.
“This computer is not authorised”	The install lock does not match. Contact your administrator; do not copy the app from another PC.
The invoice is not in the list	Check the date range. Lists default to the current month.
The report is empty	Check the As of or From/To dates, and confirm the voucher is Posted, not Cancelled.

10.4 Glossary

WORD	PLAIN MEANING
Receivable	Money a customer owes you.
Payable	Money you owe a supplier.
Debtor	The customer side of receivables.
Creditor	The supplier side of payables.
Debit (Dr)	One side of every entry. For a customer balance, Dr usually means they owe you.
Credit (Cr)	The other side. For a supplier balance, Cr usually means you owe them.
Ledger	A named account that collects movements, for example Cash or Sales.
Voucher	Any posted document: invoice, bill, receipt, payment, journal or contra.
Narration	The note printed on the voucher that explains it.
Allocation	Linking a receipt or payment to the bill it settles.

WORD	PLAIN MEANING
On account	Money received or paid that is not yet linked to a bill.
Ageing	How old unpaid bills are, grouped into 30-day buckets.
HSN / SAC	The GST classification code for goods / services.
CGST / SGST	The two halves of GST on a sale inside one state.
IGST	GST on a sale across state lines.
COGS	Cost of goods sold: what the items you sold cost you.
Opening balance	The position brought forward on the first day of the books.
Contra	A transfer between cash and bank.
Journal	A manual adjustment with matched debits and credits.
Trial balance	A list of every account balance, used to prove debits equal credits.

10.5 Daily, weekly and monthly routine

Every day

- [ ] Post today’s sales invoices.
- [ ] Post supplier bills as they arrive.
- [ ] Enter receipts and payments, with allocations.
- [ ] Create a backup at the end of the day.

Every week

- [ ] Open Receivables and chase the oldest overdue bills.
- [ ] Open Payables and plan the week’s payments.
- [ ] Check Stock Summary for items below reorder level.
- [ ] Copy the latest backup to a USB drive or another machine.

Every month

- [ ] Check the Trial Balance says “Debits equal credits.”
- [ ] Read Profit and Loss and compare it with the previous month.
- [ ] Read the Balance Sheet and explain any large movement.
- [ ] Reconcile the bank statement outside the app; use contra for transfers.
- [ ] Create a month-end backup for the accountant.

Every year

- [ ] Confirm the financial year start month in Company settings.
- [ ] Take a full backup before the new year’s first entry.
- [ ] Ask the accountant about closing journals and depreciation.

10.6 Not active in this edition

These items appear in the navigation or in a form but are reserved or only partly wired. Do not build a process around them yet.

ITEM	STATUS IN THIS EDITION
Global search in the top bar	Reserved. Use the search field on each page.
Tax Rates and Units masters	Reserved screens. GST rates are chosen on the item; units are seeded.
Users and Roles	Reserved. The owner account is the only active user.
Credit notes and debit notes	Routes exist but no screen is exposed. Cancel and re-enter for now.
Excel export	Not available. Use the on-screen report and the print dialog.
Bank reconciliation and GST return working papers	Not available. Use the registers and your accountant’s filing tool.
Invoice terms on the printed page	Saved in Company settings but not printed by the current layout.
Payment method as a bank account	The method is a label; receipts and payments post to Cash. Use Contra to move to Bank.

> **A GOOD HABIT**
>
> At the end of every week, read the trial balance before you read anything else. If it does not say “Debits equal credits”, stop and fix that first. Every other report depends on it.

10.7 Where to get help

Inside the business

- **The owner or administrator** for access, installation and backups.
- **The accountant** for journals, GST, depreciation and year-end entries.
- **The backup custodian** for the weekly copy kept off the machine.

Before you call

- The voucher number and date, if the problem is a document.
- What you expected and what happened.
- A screenshot of the message, if there is one.
- Whether you have a backup from today.

Revision history

EDITION	DATE	CHANGE
1.0	October 2026	First edition, covering company setup, masters, purchases, sales, receipts, payments, stock, journals, reports and backup.
