FOR BILLING AND ACCOUNTS STAFF

Ten minutes to your first invoice.

Six short steps. One customer, one supplier, one item, one purchase, one sale, then a check that the books balance. Stop there. Everything else can wait.

01	**Set up the company**	page 2
02	**Add a customer and a supplier**	page 3
03	**Add an item**	page 4
04	**Post a purchase bill**	page 5
05	**Post a sales invoice**	page 6
06	**Print, check and back up**	page 7

HAVE THIS READY

- Business name, address, state and GSTIN.
- Owner name, email and a password of at least 8 characters.
- The date your books should begin.

ONE OF EACH

- One customer and one supplier, with GSTIN if registered.
- One item with HSN, unit, GST rate and price.
- One purchase bill to practise with.

01

Set up the company.

This happens once. It creates the company file and the owner account. You can change the company details later in Admin → Company.

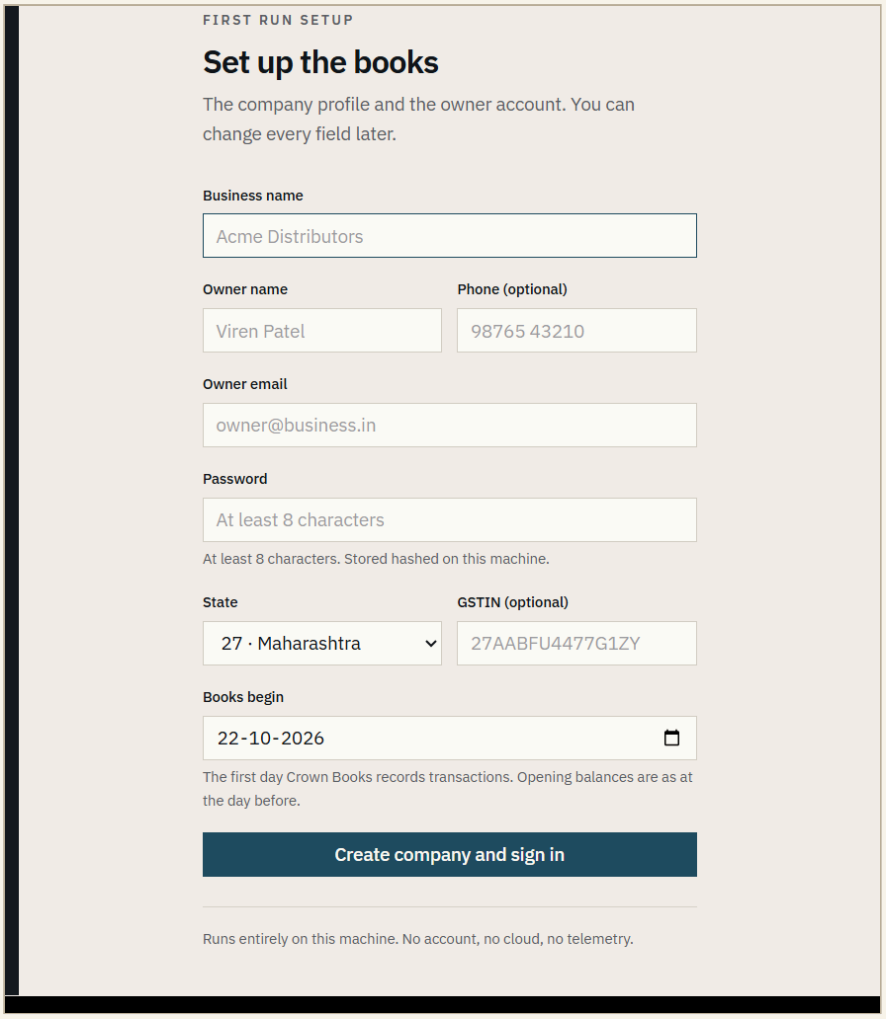

Figure 1. The first-run form. The left marketing panel is removed here so the fields are easier to read.

1. **Business name.** The name printed on invoices.
2. **Owner name and phone.** The phone is optional.
3. **Owner email.** This becomes your sign-in name.
4. **Password.** At least 8 characters. There is no email reset in this edition.
5. **State and GSTIN.** State is two digits (27 for Maharashtra); GSTIN is 15 characters.
6. **Books begin.** The first day this ledger records transactions, not the financial year.
7. Click **Create company and sign in**.

Migrating? Use the day after the last entry in the old system. Opening balances are as at the day before.

02

Add a customer and a supplier.

One record per business. The same business can be both. The role is chosen once, when the party is created.

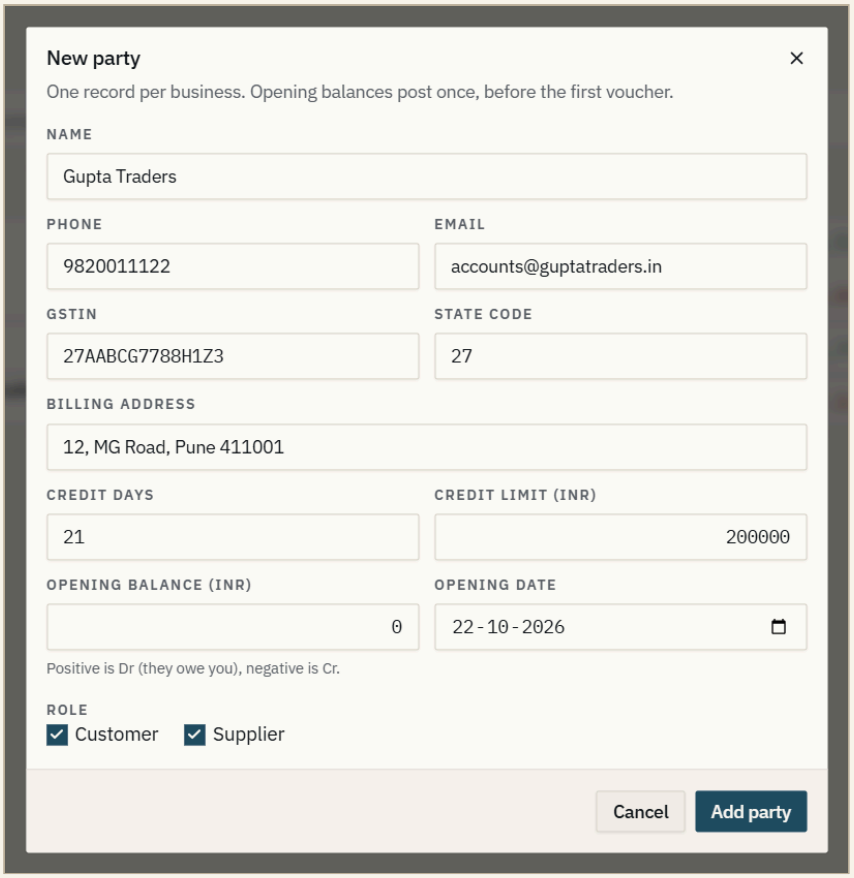

Figure 2. A party that is both a customer and a supplier. Opening balance stays at zero for a new business.

1. Open **Parties → All Parties** and click **New party**.
2. Enter **Name**, **Phone** and **Email**.
3. Enter **GSTIN** and the two-digit **State code**.
4. Set **Credit days**, usually 30. Credit limit is optional.
5. Leave **Opening balance** at zero, or enter the old balance with the correct Dr / Cr side.
6. Tick **Customer**, **Supplier**, or both. Click **Add party**.

WHY THE STATE CODE MATTERS

The customer's state decides CGST + SGST or IGST on a sale. A Karnataka customer uses 29; a Maharashtra customer uses 27. The role cannot be changed after saving.

03

Add an item.

An item is what you buy or sell. A goods item holds stock; a service item does not.

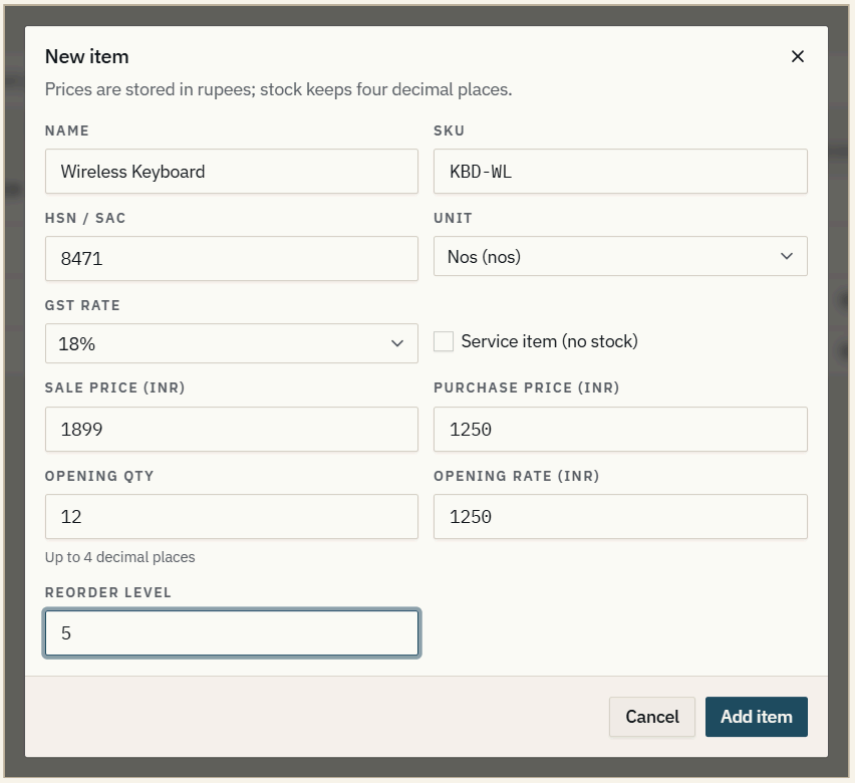

Figure 3. A goods item with opening stock. Leave opening quantity at zero if you are going to enter old purchase bills instead.

1. Open **Items** → **Items** and click **New item**.
2. Enter **Name** and **SKU**.
3. Enter **HSN / SAC** and choose a **Unit**.
4. Choose the **GST rate**: 0, 5, 12, 18 or 28 percent.
5. Tick **Service item (no stock)** only for services.
6. Enter **Sale price** and **Purchase price**. Click **Add item**.

> **OPENING STOCK OR PURCHASE HISTORY, NOT BOTH**
>
> If you enter opening quantity for goods, do not also enter old purchase bills for the same goods. The stock and cost would be counted twice. For this first run, leave opening quantity at zero.

04

Post a purchase bill.

This records what you bought and what you owe the supplier. It does not pay the supplier.

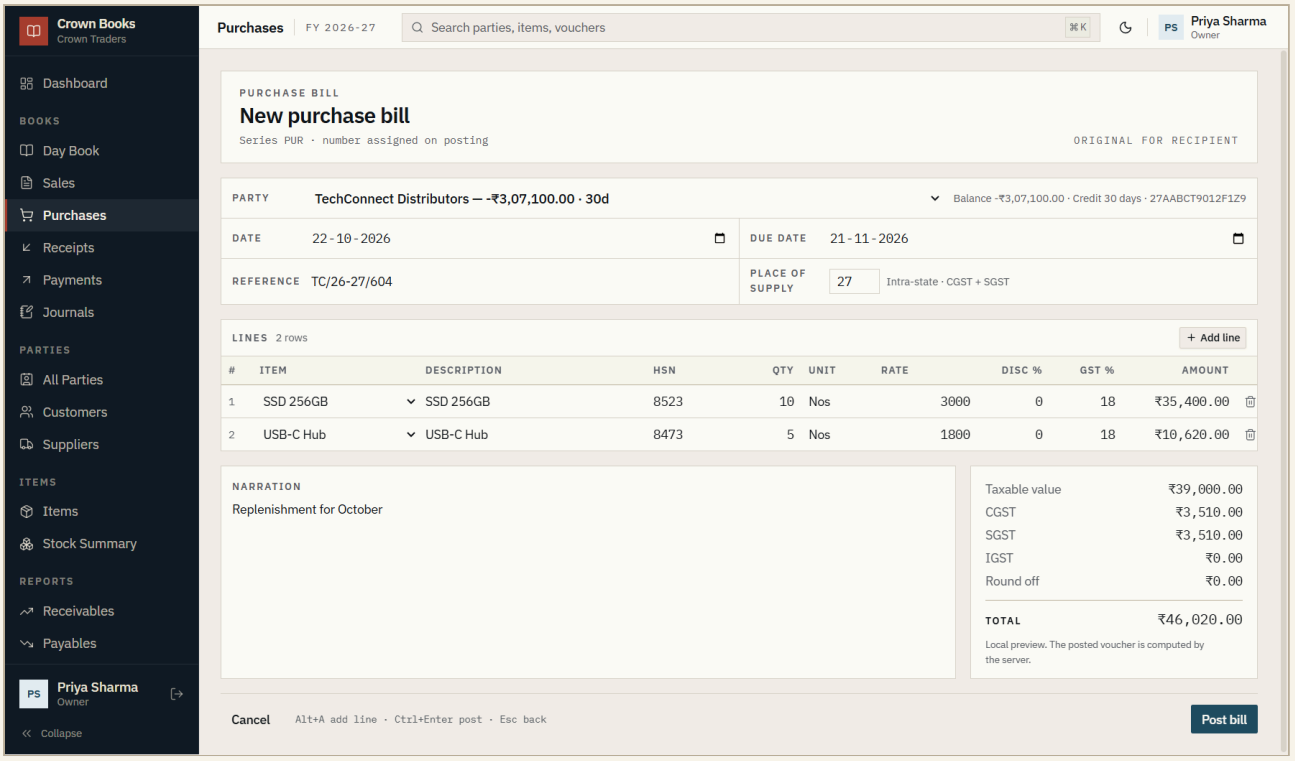

Figure 4. A purchase bill with two lines. The total is calculated before posting.

1. Open **Books → Purchases** and click **New bill**.
2. Choose the **supplier**.
3. Check the **Date** and **Due date**.
4. Enter the supplier's bill number in **Reference**.
5. **Place of supply** is the supplier's state.
6. **Add line**, choose the item, then enter **Qty**, **Rate**, **Disc %** and **GST %**.
7. Check the **Total** against the paper bill.
8. Click **Post bill**.

> **THE BILL IS NOT THE PAYMENT**
>
> Posting the bill creates the supplier payable and brings stock in. When money leaves, record a payment separately. Full guide: section 5.5.

05

Post a sales invoice.

This records what the customer owes you. Every sale is against a customer; a cash sale is an invoice followed by a receipt.

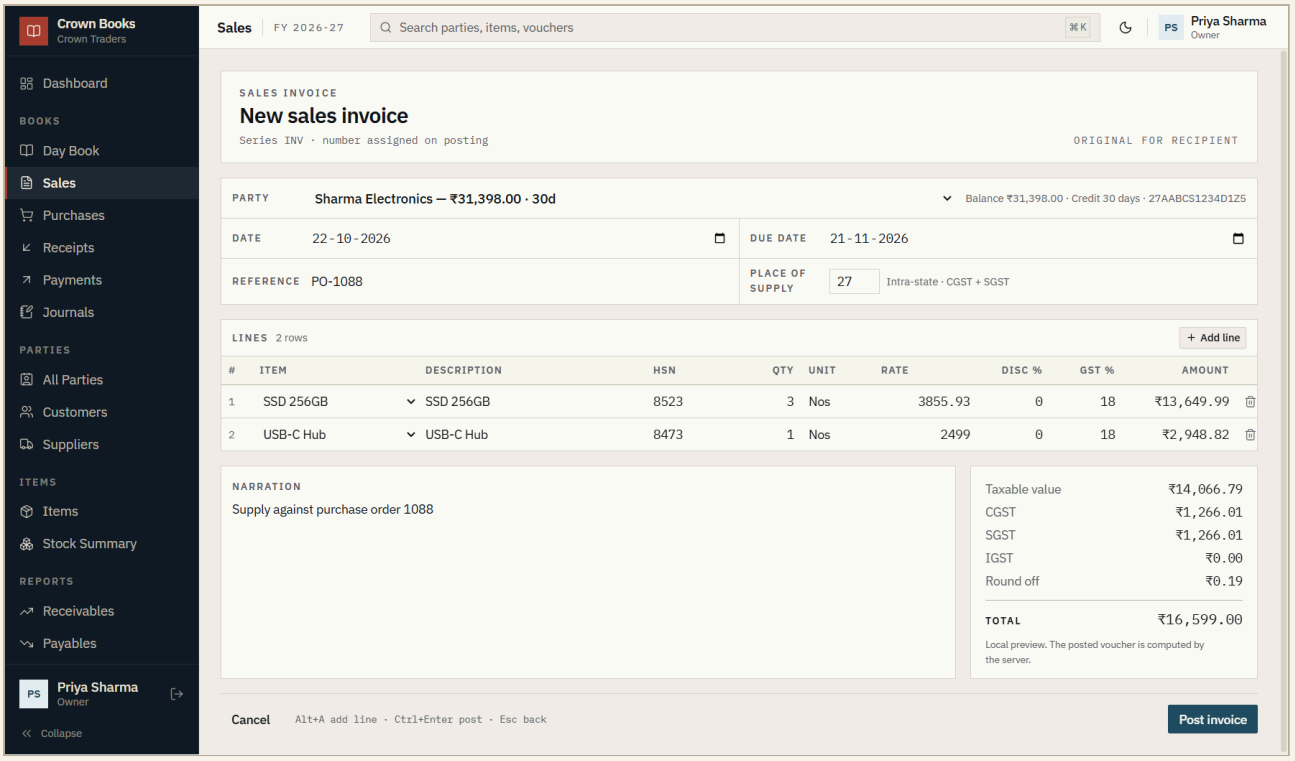

Figure 5. A sale to a Maharashtra customer, so the tax is CGST + SGST.

1. Open **Books → Sales** and click **New invoice**.
2. Choose the **customer**.
3. Check the **Date** and **Due date**.
4. Enter the customer's purchase order in **Reference**.
5. **Place of supply** is the customer's state.
6. **Add line**, choose the item, then enter **Qty** and **Rate**.
7. Check the tax split and **Total**.
8. Click **Post invoice**.

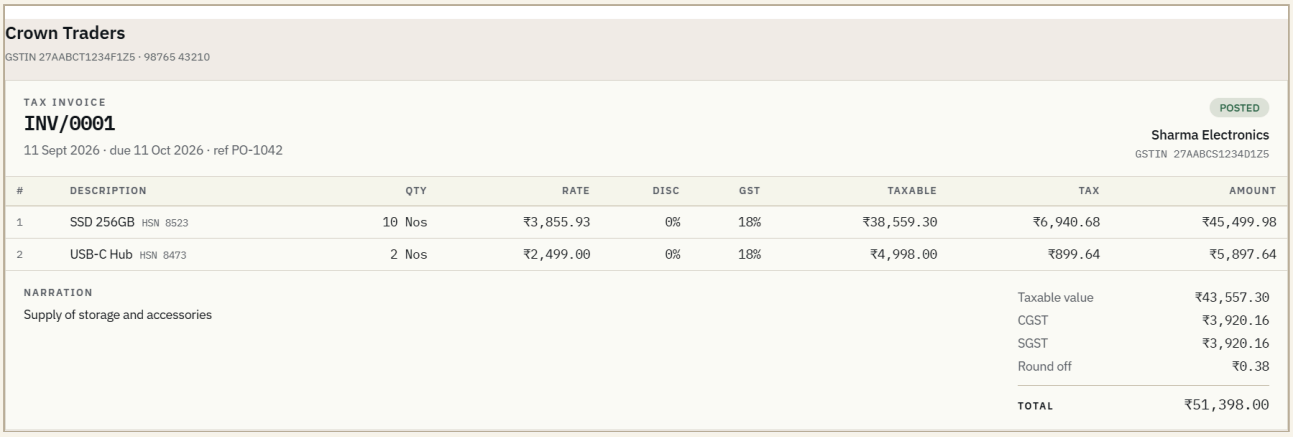

THE MOST COMMON GST MISTAKE

The place of supply defaults to your company's state. Change it to the customer's state before posting an out-of-state sale, or the invoice will charge CGST + SGST instead of IGST.

06

Print it, prove it, back it up.

Three checks. If the paper looks right and the trial balance balances, the first cycle is complete.

NARRATION
Supply of storage and accessories

Taxable value	₹43,557.30
CGST	₹3,920.16
SGST	₹3,920.16
Round off	₹0.38
TOTAL	₹51,398.00

Figure 6. Open the invoice from Sales, click **Print**, then choose a printer or **Save as PDF**.

01
PRINT

Open the sale, click **Print**, and check the customer, GSTIN, lines, tax and total.

02
PROVE

Open **Reports → Trial Balance**. The green line must say “Debits equal credits.”

03
PROTECT

Open **Admin → Backup** and click **Create backup** before you stop.

Trial balance	**debits = credits**
Debits equal credits.	

The trial balance ends with this line. If it is missing, stop and ask your accountant.

If something is wrong

Cancel the voucher with a reason and enter it again. Posted vouchers are never edited, and the cancelled number is kept in the day book.

What comes next

Receipts, payments, payables, receivables, ageing, journals and the full reports are in the 52-page user guide. Start with chapters 5 and 6.
